Alencar, 2004-02-24 Advances in networking technology have revitalized the investigation of agent technology as a promising paradigm for engineering complex distributed software systems Agent technology has been applied to a wide range of application mains including e commerce human computer interfaces telecommunications and software assistants Multi agent systems MASs and their underlying theories provide a more natural support for ensuring important properties such as autonomy mobility environment heterogeneity organization openness and intelligence As a consequence

agent based systems are likely to provide new proaches to dealing with the complexity of developing and maintaining modern software However developing robust large scale agent based systems will quire new software engineering approaches There are currently many methods and techniques for working with individual agents or with systems built using only a few agents Unfortunately agent based software engineering is still in its infancy and existing software engineering approaches are unable to cope with large MASs The complexity associated with a large MAS is considerable When a huge number of agents interact over heterogeneous environments various phenomena occur which are not as easy to capture as when only a few agents are working together As the multiple software agents are highly collaborative and operate in networked environments they have to be context aware and deal with vironment uncertainty This makes their coordination and management more di cult and increases the likelihood of exceptional situations such as security holes privacy violations and unexpected global e cts Moreover as users and softwareengineersdelegatemoreautonomytotheirMASs andputmoretrustin their results new concerns arise in real life applications

Transactions on Aspect-Oriented Software Development V Awais Rashid,2009-06-02 The six papers collected here from the journal devoted to all facets of aspect oriented software development AOSD techniques includes three submitted through the regular channels and three that focus on the area of aspects dependencies and interactions
