Fixing Climate Wallace S. Broecker, Robert Kunzig, 2025-06-25 Dealing with the Root Cause of Global Warming Calls for New Remedies Says Expert The product of a unique collaboration between a pioneering earth scientist and an award winning science writer Fixing Climate takes an unconventional approach to the vitally important issue of global warming Wallace S Broecker a longtime researcher at Columbia University's Lamont Doherty Earth Observatory warned about the possible consequences of global warming decades before the concept entered popular consciousness Hooked on climate studies since his student days he has learned largely through his own findings that climate changes naturally dramatically and rarely benignly He also knows from experience that when mankind pushes nature as we are currently doing by dumping some sixty to seventy million metric tons of carbon dioxide into the atmosphere every day climate will change even more dramatically and less benignly As Broecker points out if a well meaning fairy godmother were to turn us all into energysaving paragons at the stroke of midnight tonight the resulting reduction in atmospheric carbon dioxide might lessen but could not turn aside the great warming tide now headed our way There is nonetheless a glimmer of hope in the development of new technologies that are directed not only at the reduction of carbon dioxide output but also at its harmless disposal Told by skilled science journalist Robert Kunzig Fixing Climate is a timely and informative story that makes for riveting reading **What We Know**
