Self-assessment Questions for Clinical Molecular Genetics Haiying Meng, 2019-05-28 Review Questions of Clinical Molecular Genetics presents a comprehensive study guide for the board and certificate exams presented by the American College of Medical Genetics and Genomics ACMG and the American Board of Medical Genetics and Genomics ABMGG. It provides residents and fellows in genetics and genomics with over 1 000 concise questions ranging from topics in cystic fibrosis to genetic counseling to trinucleotide repeat expansion disorders. It puts key points in the form of questions thus challenging the reader to retain knowledge. As board and certificate exams require knowledge of new technologies and applications, this book helps users meet that challenge. Includes over 1 000 multiple choice USMLE style questions to help readers prepare for specialty exams in Clinical Cytogenetics and Clinical Molecular Genetics. Designed to assist clinical molecular genetic fellows, genetic counselors, medical genetic residents and fellows, and molecular pathologist residents in preparing for their certification exam. Assists trainees on how to follow guidelines and put them in practice.

HEMATOPATHOLOGY Q BANK Hany Sakr, MD, 2021-12-07 For many years we have noticed the lack of a concise yet comprehensive question and answer style book that thoroughly covers hematology, hematolymphoid neoplasms, and coagulation disorders and renders them in an easy and digestible manner to the busy hematopathologists and fellows in training. There are many excellent textbooks written by experts in the field which are indispensable. However, and for sake of board exam cramming, these may not be the preferred source for studying. Most of the available hematology question books are case series based, and the authors refrain from following or maintaining a board exam style. Our Hematopathology Q Bank Board Style Review will be the first Q bank in the field that comprehensively covers adult and pediatric disorders in hematology, hematopathology, and coagulation subspecialties. The book falls in eleven chapters and includes 380 written questions without images, 230 questions with high resolution images, nearly 100 short case series and case studies, and 40 tables, charts, and algorithms. The contents cover both benign reactive and neoplastic conditions in hematopoietic and lymphoid systems, hematology related cytology, and FNA, challenging cases, flow cytometry, cytogenetics, and molecular genetics. This is in addition to coagulation disorders and some laboratory management. The bank is full of interpretation rules and differential diagnosis tables and fact sheets for easy board cramming. Materials have been derived from up to date textbooks including the revised fourth edition of WHO classification of hematopoietic and lymphoid tumors, articles, and real time cases encountered in the laboratory. It is our sincere hope that this hematopathology review book fills a gap in the field and that hematopathology fellows in training and attending clinical pathologists find it a wealth of up to date information presented in an easy way. We hope they find this Q bank of utmost benefit in preparing for exams including both clinical pathology and hematopathology subspecialty exams.
