

Lecture Notes: Galaxies and Dark Matter

Introduction:

- Galaxies are collections of stars, gas, and dust held together by gravity.
- The dark matter halo is an invisible structure surrounding a galaxy that exerts a gravitational force on its contents.
- The connection between galaxies and dark matter halos is a fundamental aspect of modern astrophysics.

Observations and Evidence:

- Observations of the rotation curves of galaxies reveal that they are spinning too quickly to be held together by the visible matter alone.
- This indicates the presence of a significant amount of invisible mass, or dark matter, surrounding the galaxy.
- Numerical simulations of the formation and evolution of galaxies suggest that they form within massive dark matter halos.
- These simulations also show that the structure and properties of galaxies are strongly influenced by the properties of their dark matter halos.

Theoretical Models:

- The most widely accepted model for the formation of galaxies is the hierarchical merging model, in which galaxies grow by merging with smaller galaxies over time.
- This model predicts that the properties of a galaxy, such as its size, shape, and star formation rate, are determined by the properties of its dark matter halo.
- Theoretical models also suggest that the distribution of dark matter within a halo determines the distribution of visible matter within a galaxy.

Observational Challenges:

- Observing dark matter directly is challenging because it does not emit, absorb, or reflect light.

Dark Matter and Dark Energy... a Solution??? Francisco Gutiérrez de la Cruz, 2019 **Yet Another Introduction to Dark Matter** Martin Bauer, Tilman

Plehn,2019-06-11 Dark matter is a frequently discussed topic in contemporary particle physics Written strictly in the language of particle physics and quantum field theory these course based lecture notes focus on a set of standard calculations that students need in order to understand weakly interacting dark matter candidates After introducing some general features of these dark matter agents and their main competitors the Higgs portal scalar and supersymmetric neutralinos are introduced as our default models In turn this serves as a basis for exploring four experimental aspects the dark matter relic density extracted from the cosmic microwave background indirect detection including the Fermi galactic center excess direct detection and collider searches Alternative approaches like an effective theory of dark matter and simplified models naturally follow from the discussions of these four experimental directions *Proceedings* ,1965 Black Marbles and Bright Energy Thomas V. Moore,2015-06-05 BLACK MARBLES and BRIGHT ENERGY Dark Matter and Dark Energy Explained The science of cosmology why our universe is what it is abounds with unanswered questions What is Dark Matter What is Dark Energy What is the structure of a Black Hole Why is the rate of expansion of the universe increasing This book provides answers to these questions and many others by proposing an original approach called Black Marble Theory It is a simple elegant and non mathematical idea that can be easily understood by a non technical reader The fundamental proposition is simply that matter can exist in a different state than the ordinary matter that we can see in the universe It is called Black Matter It is produced when all of the space is compressed out of Ordinary Matter by extreme gravity If there is enough Ordinary Matter to start with the Black Matter will form a solid sphere called a Black Marble Black Marbles form the center of Black Holes From this basic idea the theory follows logical steps that provide clear and plausible explanations of the most profound mysteries that confront Physics today It explains the structure of the Black Hole the formation of galaxies and the Big Bang itself The theory also provides a surprisingly simple explanation of the source and fuel of the Dark Energy that propels the expansion of the universe In an hour of easy reading it will become clear Why our universe is just what it appears to be *The Search for WIMP Dark Matter Around Our Galaxy - Lecture 1 of 2* ,2006
