## Concepts of Database Management Chapter 5 Questions with Correct Answers Fully Solved Latest 2025

**Alternate key** - Answers A candidate key that was not chosen to be the primary key

**Boyce-Codd normal form (BCNF)** - Answers A relation is in Boyce-Codd normal form if it is in second normal form and the only determinants it contains are candidate keys.

**Candidate key** - Answers A minimal collection of columns (attributes) in a table on which all columns are functionally dependent but that has not necessarily been chosen as the primary key.

**Concatenation** - Answers The combination of two or more rows in

an operation, such as a join, or the combination of two or more columns for a primary key field to uniquely identify a given row in the table.

**Dependency diagram** - Answers A diagram that indicates the dependencies among the columns in a table.

**Determinant** - Answers A column in a table that determines at least one other column.

**First normal form (1NF)** - Answers A table is in first normal form if it does not contain a repeating group.

**Fourth normal form (4NF)** - Answers A table is in fourth normal form if it is in third normal form and there are no multivalued dependencies.

**Functional dependence** - Answers Column B is functionally dependent on column A (or on a collection of columns) if a value for A determines a single value for B at any one time.

**Functionally dependent** - Answers Column B is functionally dependent on column A (or on a collection of columns) if a value for A determines a single value for B at any one time.

**Functionally determines** - Answers Column A functionally determines column B if B is functionally dependent on A.

**Interrelation constraint** - Answers A constraint that involves more than one relation.

**Multiddependent** - Answers In a table with columns A, B, and C, B is multiddependent on A if each value for A is associated with a specific collection of values for B and, further, this collection is independent of any values for C.

**Multidetermine** - Answers In a table with columns A, B, and C, A multidetermines B if each value for A is associated with a specific collection of values for B and, further, this collection is independent of any values for C.
