

Lesson 2: Ratios

Student Outcomes

- Students reinforce their understanding that a ratio is an ordered pair of nonnegative numbers, which are not both zero. Students continue to learn and use the precise language and notation of ratios (e.g., 3: 2, 3 to 2). Students demonstrate their understanding that the order of the pair of numbers in a ratio matters.
- Students create multiple ratios from a context in which more than two quantities are given. Students conceive of real-world contextual situations to match a given ratio.

Classwork

Exercise 1 (5 minutes)

Allow students time to complete the exercise. Students can work in small groups or pairs for the exercise.

Exercise 1

Come up with two examples of ratio relationships that are interesting to you.

- My brother watches twice as much television as I do. The ratio of number of hours he watches in a day to the number of hours I watch in a day is usually 2: 1.*
- For every 2 chores my mom gives my brother, she gives 3 to me. The ratio is 2: 3.*

Allow students to share by writing the examples on the board, being careful to include some of the verbal clues that indicate a ratio relationship: *to*, *for each*, *for every*.

- What are the verbal cues that tell us someone is talking about a ratio relationship?

Exploratory Challenge (30 minutes)

Have students read and study the description of the data in the chart provided in their student materials. Ask students to explain what the chart is about (if possible, without looking back at the description). This strategy encourages students to really internalize the information given as opposed to jumping right into the problem without knowing the pertinent information.

- Based on the survey, should the company order more pink fabric or more orange fabric?
- What is the ratio of the number of bolts of pink fabric to the number of bolts of orange fabric you think the company should order?
- Someone said 5 to 3, and another person said (or my friend said) it would be 3 to 5. Are those the same? Is a ratio of 3 to 5 the same as a ratio of 5 to 3?
- Write a statement that describes the ratio relationship of this 3 to 5 ratio that we have been talking about.

Using Content-area Graphic Texts for Learning Meryl Jaffe, Katie Monnin, 2013 What counts as literacy has been redefined in today's classrooms. Teachers must address what it means to read and live in a multi-literate world that includes both print text and image text. Focused specifically on young adult graphic novels in the four primary content areas: math, language arts, social studies, and science. Using Content Area Graphic Texts for Learning: A Guide for Middle Level Educators by Dr. Meryl Jaffe and Dr. Katie Monnin empowers twenty-first century middle school educators to not only better understand content area graphic novels but also teach them. Like their print counterparts, graphic texts reinforce traditional content area thinking skills like memory, attention, cognition, language learning, and sequencing. Unlike print texts, however, comics and graphic novels reach out to diverse types of literacy learners and their particular reading strengths, making them the perfect high-quality literary level texts for core content area classrooms. Using Content Area Graphic Texts for Learning begins with the building blocks of graphic novel terminology. 101 moves into a detailed look at how graphic texts specifically help and empower different types of learners and then branches off into specific chapters for each of four content areas: math, language arts, social studies, and science. Each of these content area chapters includes an overview of how graphic novels help students tackle, integrate, and enhance content area material; two content area lesson plans, each utilizing graphic novels in different ways; a demonstration of what that lesson plan is asking students to do, focusing on five learning skills: attention, memory, language, sequencing, and cognition; and how the lesson aligns with the appropriate content area's Common Core Standards; a discussion on how graphic novels help different types of learners succeed in the content area classrooms; and a list of suggested graphic novels for each content area classroom. Jaffe and Monnin more than make the case for using graphic novels as valid young adult literary texts that engage students and meet Common Core State Standards within the content area classroom.

50 Leveled Math Problems Level 6 Anne Collins, 2012-04-01 It includes 50 leveled math problems, 150 problems total, an overview of the problem-solving process, and ideas for formative assessment of students' problem-solving abilities. It also includes 50 mini-lessons and a student activity sheet featuring a problem tiered at three levels, plus digital resources that include electronic versions of activity sheets. This resource is aligned to the interdisciplinary themes from the Partnership for 21st Century Skills and supports core concepts of STEM instruction.

Differentiated Instruction Ervin F. Sparapani, 2013-08-15 In the current standards-based, accountability-driven world of education, it is difficult for educators to use differentiated instruction to cater to the individual learning needs of each student. This book explains differentiating instruction in a way that connects to current standards and provides examples of challenging best practice lessons.
