**Counts!** Paul Shoecraft, 2025-01-24 Dr Shoecraft may be the only mathematician since the New Math in the 1960s to

seriously analyze the lowly subject of arithmetic and how to teach it His breakthrough came when he experimented with teaching what needs to be understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains By teaching the essence of arithmetic in sensible ways and appealing to children's love of games songs and movement he's proven that virtually ALL children can learn arithmetic the foundation of algebra higher mathematics science technology and more even music When children understand arithmetic they own it It's no longer just their teacher's math It's their math America's children are being held back in math because of how arithmetic is drug out in elementary school Virtually every textbook based elementary school math program in use today is mind numbing in its repetitiveness from grade to grade The reason for the redundancy is to slow down the teaching of arithmetic so it can be memorized Research shows that the human brain is not designed to remember things learned by rote when no longer practiced That's acknowledged in the use it or lose it aphorism that states the obvious that we remember what we use and forget what we don't You know that to be true if you've ever forgotten things you once knew as well as your own name things like an old address or a license plate number Every child can understand base ten numeration when taught hands on with arithmetic blocks Thereby every child can understand base ten arithmetic And every child can learn how to count out the number facts like 5 7 12 17 8 9 6 X 7 42 and 56 7 8 and if they forget one never have to guess and risk ridicule and bad grades if they guess wrong What matters in teaching arithmetic is not how much a child can remember but how much they can figure out if when they forget

Wing Chan,Maurice Galton,Kwok Chan Lai,John Chi-Kin Lee,2016-04-28 Much debate research and commentary about class  
sizes in schools is limited because of an exclusive concern with class size and pupil academic attainment and a neglect of  
classroom processes which might help explain class size effects or lack of them Very little is known about the central  
question how can teachers make the most of class size changes Much of the commentary on class size effects has focused on  
Western and English speaking countries but there are promising developments elsewhere particularly the Small Class  
Teaching initiatives in East Asia in the past decade which have brought new knowledge and practical wisdom to the class size  
debate This book seeks to move toward a clearer view of what we know and do not know about class size effects and to  
identify future steps in terms of policy and research There is a huge and exciting potential for international collaboration on  
knowledge concerning class size effects which can help with research informed policy The book aims to draw out Eastern and  
Western international contexts which underpin any understanding of the role of class size in school learning The book has  
chapters by an international team of experts on class size effects including Maurice Galton and John Hattie Chapters are  
organised into four main sections Socio cultural and political contexts to the class size debate in the East and West Research  
evidence on class size Class size and classroom processes likely to be related to class size changes Professional development  
for small class teaching in East Asia      **Common Core Assessment Templates** Velerion Damarke,2014-02-18 Nearly every
