

Part Name	Common Faults or Alarms	Actions Required
Evaporator Motor	E205	Remove hatch bolts, fans can sometimes be seized by an obstruction. If no obstruction and fan blade is seized, a new motor is required.
Condenser Motor	Not a common fault	Sometimes these fans get caught on the grille. Free up and try turning on, if not, new motor or capacitor is needed.
Compressor	Power trips when compressor starts or there is a large amount of oil at the bottom of the compressor from corrosion	Have an electrician check the voltage being supplied to the container is correct. Sometimes this causes the compressor to "single phase". If power is ok, compressor is most likely fault.
Filter Drier	Leaking drier	Check for oil near the flare nut connections of the drier, this indicates the unit is leaking refrigerant.
Power Cable and Plug	Unit no power	Sometimes the wires can come out of the plug. Check plug for signs of burn out and check cable for signs of physical damage. Cable can be replaced or repaired in sections and plugs will need replacement.
Keypad	Not a common issue	If unit is not running, press on/off button on display
Display	No display	If you can hear the unit running but no temperature display is showing, this is usually caused by a faulty display or loose display wiring. Check wiring before ordering a display.
