

TP5000 & TP5000-RF Programmable Room Thermostat

TP5000 & TP5000-RF

RX Receiver (RF models only)

Features

The TP5000 combines the functions of a time clock and room thermostat into a stylish, simple to use controller that allows the user to programme different temperatures for different times of the day. Both models offer 5 day / 2 day programming, enabling different programmes to be selected for weekdays and weekends.

Models are available with hard-wired connections, type TP5000 or with labour saving RF wireless communication, type TP5000-RF. All models in the range offer up to 6 time and temperature changes each day and include the option of programming an Off event as well as a set-back temperature. TP5000 can also be set to provide 2 events each day, which is more suited to many commercial applications.

Programming is achieved using just five buttons which also provide useful user overrides including thermostat mode, frost mode and weekend into-weekday override whilst the thermostat is in run mode.

In addition to the regular hard-wired model, the range also includes an RF model, type TP5000-RF, which incorporates a radio transmitter. This allows secure digital wireless communication between the thermostat and a receiver unit that can be located up to 30 metres from the thermostat. Receiver modules, type RX, are available in 1, 2 & 3 zone versions, each one requiring its own thermostat and all of which are matched to their respective thermostats on site during the commissioning process.

- Up to 6 time and temperature events each day
- Weekday / weekend programming
- Battery powered, 2 wire control for ease of installation
- Many user overrides including thermostat mode
- Choice of On/Off or proportional regulation
- Available in hard-wired and wireless versions
