Information Technology Standards and Standardization Kai Jakobs, 2000 This volume paints a picture of the varied and diverse aspects surrounding information technology standards and standardization and aims to serve as a foundation for research discussion and practice

A deep ultraviolet laser light source by frequency doubling of GaN based external cavity diode laser radiation Norman Ruhnke, 2022-05-13 A compact and portable laser light source emitting in the wavelength range between 210 nm and 230 nm would enable numerous applications outside of laboratory environments such as sterilization and disinfection of medical equipment water purification or gas and air analysis using absorption spectroscopy Such a source is also highly attractive for the identification and quantification of proteins and biomolecules by means of laser induced fluorescence or Raman spectroscopy In this thesis a novel concept to realize such a compact and portable laser light source with low power consumption and an emission around 222 nm is investigated The developed concept is based on single pass frequency doubling of a commercially available high power GaN laser diode emitting in the blue spectral range Due to the low frequency doubling conversion efficiencies in this wavelength range of about 10 % a laser diode with high optical output power above 1 W is required as pump source Moreover it has to exhibit narrowband emission in the range of the acceptance bandwidth of the applied nonlinear BBO crystal Since GaN based high power laser diodes typically show broad emission spectra of 12 nm stabilizing and narrowing their wavelength by using external wavelength selective elements is investigated and presented for the first time With the understanding for the novel concept gained in this work a compact ultraviolet laser light source was realized It has a power consumption of less than 10 W and is exceptionally robust due to its immovable components The demonstrated output power of 160 W enables numerous industrial and everyday applications for which previous laser systems have been too complex and overly cost and energy intensive

Helping People with Special Needs is like an island in this a topic at all these days is it worth discussing the area of ICT and the situation of people with disabilities persons who are segregated from developing their personal and professional careers Indeed the biennial meeting has never included these actualities but the basic idea behind ICCHP starting in 1989 was to focus on these fringe groups and to offer a platform of exchange on all aspects of Human Computer Interaction and the usage of ICT for people with special needs
