1. Introduction

Congratulations on your Danfoss Nessie Plug&Spray™ unit. To ensure the best performance and service life of our product, please read this instruction carefully and follow the recommendations how to integrate the Plug&Spray™ unit into your system.

2. General performance

The Nessie high-pressure water products from Danfoss are designed to operate on clean tap or potable water and technical water with low conductivity (De-Mineralized, De-Ionized, Reverse Osmosis). Danfoss defines clean tap water as water filtered to 10 µm absolute, β value > than 5000. This means that the water is filtered to a level where 99.995% of all particles larger than 10 µm have been filtered out. Since Nessie pumps are water lubricated and cooled, failing to meet the water quality specification will reduce the expected service life of the components and void the limited warranty. It should be noted that systems with high-pressure atomization nozzles require a high filtration degree of the water to ensure optimal performance of the spray nozzles.

It is the responsibility of the end-user to provide sufficient feed water.

The system must be properly bled of air to prevent the pump from cavitating and running dry. Improper bleeding will cause cavitation and damage the pump (see chapter on commissioning).

Danfoss Nessie products are manufactured to operate properly at water temperatures of 3°C to 50°C (37°F to 122°F). Operation outside this area may cause damage to the system.

The Plug&Spray™ unit must be operated within the specifications stated in this manual. Sustained operation of components above the recommended limits will cause excessive wear and shorter service life.
