Australian Army Protocol Manual 2015:

Weapons and the Law of Armed Conflict William H. Boothby, 2016-03-10 Bringing together the law of armed conflict governing the use of weapons into a single volume the fully updated Second Edition of *Weapons and the Law of Armed Conflict* interprets these rules and discusses the factors influencing future developments in weapons law After relating the historical evolution of weapons law the book discusses the important customary principles that are the foundation of the subject and provides a condensed account of the law that exists on the use of weapons The treaties and customary rules applying to particular categories of weapon are thereafter listed and explained article by article and rule by rule in a series of chapters Having stated the law as it is the book then explores the way in which this dynamic field of international law develops in the light of various influences The legal review of weapons is discussed both from the perspective of how such reviews should be undertaken and how such a system should be established Having stated the law as it is the book then investigates the way in which this dynamic field of international law develops in the light of various influences In the final chapter the prospects for future rule change are considered This Second Edition includes a discussion of new treaty law on expanding bullets the arms trade and norms in relation to biological and chemical weapons It also analyses the International Manuals on air and missile warfare law and on cyber warfare law the challenges posed by lethal autonomous weapon systems and developments in the field of information and telecommunications otherwise known as cyber activities **Hague Law**

Interpreted Stuart Casey-Maslen, Steven Haines, 2018-11-15 Given the centrality of Hague Law to the lawful prosecution of warfare the relative paucity of dedicated works is surprising The general formulation of Hague Law rules is largely uncontroversial but this clarity stands in stark contrast to their interpretation and practical application How precisely for instance the fundamental rules of distinction and proportionality in attack are to dictate and constrain the planning and practice of warfare continues to be highly uncertain This important new publication fills the gap in the literature Offering a comprehensive assessment of Hague Law it explores questions of definitions and accountability and navigates the substantive rules and their application to different types of warfare **Guidelines for Mine Waste Dump and Stockpile**

Design Mark Hawley, John Cuning, 2017-04-01 *Guidelines for Mine Waste Dump and Stockpile Design* is a comprehensive practical guide to the investigation design operation and monitoring of mine waste dumps dragline spoils and major stockpiles associated with large open pit mines These facilities are some of the largest man made structures on Earth and while most have performed very well there are cases where instabilities have occurred with severe consequences including loss of life and extensive environmental and economic damage Developed and written by industry experts with extensive knowledge and experience this book is an initiative of the Large Open Pit LOP Project It comprises 16 chapters that follow the life cycle of a mine waste dump dragline spoil or stockpile from site selection to closure and reclamation It describes the investigation and design process introduces a comprehensive stability rating and hazard classification system provides

guidance on acceptability criteria and sets out the key elements of stability and runout analysis Chapters on site and material characterisation surface water and groundwater characterisation and management risk assessment operations and monitoring management of ARD emerging technologies and closure are included A chapter is also dedicated to the analysis and design of dragline spoils Guidelines for Mine Waste Dump and Stockpile Design summarises the current state of practice and provides insight and guidance to mine operators geotechnical engineers mining engineers hydrogeologists geologists and other individuals that are responsible at the mine site level for ensuring the stability and performance of these structures Readership includes mining engineers geotechnical engineers civil engineers engineering geologists hydrogeologists environmental scientists and other professionals involved in the site selection investigation design permitting construction operation monitoring closure and reclamation of mine waste dumps and stockpiles
