distribution network adapted to medium voltage microgrid access Qinghui Lu, Xiang-Gen Yin, Jian Qiao, Zhichang Liu, Lingjin Zhu, Xin Yin, 2023-09-16 Aim The access of the medium voltage MV microgrid changes the radial structure of traditional distribution networks causing the distribution network to operate in a closed loop manner The closed loop operation complicates the fault characteristics of the distribution network and the traditional single phase grounding SPG line selection method is no longer applicable Therefore it is necessary to propose a new targeted SPG line selection method Methods This paper analyzes the network structure of MV microgrids and MV distribution networks and establishes a multi level closed loop operation distribution network model with MV microgrid access Then the SPG fault characteristics of the

closed loop operation distribution system under the small current grounding mode are analyzed from the perspective of two level bus nodes Furthermore based on the analysis of fault characteristics a closed loop operation distribution network line selection method suitable for microgrid access is proposed and a detailed design is carried out in terms of equipment configuration and communication schemes forming a relatively complete automatic line selection system At the same time the proposed line selection scheme is based on the two level bus nodes which can be analogously applied to the multi level closed loop operation distribution network Results The simulation results show that the proposed line selection scheme can be effectively applied to the closed loop operation distribution network with MV microgrid access Conclusion The traditional SPG line selection method will have misjudgment problems after the MV microgrid is integrated into the distribution network but the line selection method proposed in this paper has good adaptability *The Electrical Journal* ,1953 **The**
