

without delaying the whole project. Because of CPA VBH managers will know which tasks are important for the project to be done on time, they will be more concentrated and careful which will result in less wastage taking place. CPA enables them to ^{know} when the activities are starting and when its ending, LFT's, to be able to monitor the progress and see the possible consequences if the activities are running late. Since Amit is concerned that the delivery of office equipment, ~~is~~ Activity F, is going to be delayed by 12 days and it will delay the opening of the new centre which will lead to potential loss of revenue and thus profit. With the help of CPA Amit knows that the EST of activity E is day 5 and it has total and free float of 15 days which means a delay of 12 days won't delay the whole project instead if they arrive very early at day 5 it will increase the cash out flow before hand and till the time activity H takes place, employee training, considering that the EST is day 29 and it has a float time of 4 days $[43-10-29]$, the equipment's productive efficiency will reduce for not being used for the longest time. Therefore it would be more beneficial if it arrives 12 days later. CPA also helps in setting goals which can motivate employees at VBH which can cause ^{the} beehive to be open on time as they will get more involved. CPA value of 43 days can help VBH to inform their customers by when the centre will be available and customers won't go elsewhere, this will increase the revenue and ensure that capital utilisation is higher when the project ends. On the other hand guesswork is common in making of network diagrams but since this is going to be their relevant beehive, they have an experience in planning these projects so must be accurate. Though a poor management or unskilled employees cannot ensure success in the project even if the plan was good. The ability to complete a project on time will also depend on the reliability of suppliers and external factors like country w is facing.
