

1992 AUSTROADS Bridge Design Code

R.J.L. Wedgwood

ABSTRACT

The 1992 AUSTROADS Bridge Design Code has been developed in limit states format. As such, it will allow the strength of bridges to be determined on a consistent rational basis for the relevant applied loadings and material properties.

Satisfaction of the strength requirements of the Code will ensure that a bridge will not fail in its expected lifetime. Satisfaction of the serviceability requirements will minimise maintenance resource requirements by ensuring the performance of new bridges throughout their life and by identifying potential inadequacies in existing bridges at an early stage, thus allowing more effective remedial treatment.

The Code has a background in overseas bridge code developments and also through links with complementary Australian Standards. Significant variations in the Code provisions from the existing NAASRA 1976 Bridge Design Specifications are described.

The new Code will be a valuable resource to assist bridge designers to provide even better solutions to the bridge engineering challenges of the future.

Goble, 1999 This synthesis report will be of interest to geotechnical structural and bridge engineers especially those involved in the development and implementation of the geotechnical aspects of the AASHTO Bridge Code The synthesis documents a review of geotechnical related LRFD specifications and their development worldwide to compare them with the current AASHTO LRFD Bridge Code Design procedures for foundations earth retaining structures and culverts are summarized and compared with the methods specified by the AASHTO code This TRB report provides information designed to assist engineers in implementing the geotechnical features of LRFD methods Information for the synthesis was collected by surveying U S and Canadian transportation agencies and by conducting a literature search using domestic and international sources Interviews were also conducted with selected international experts The limited available experience in the United States and information from international practice are discussed to understand the problems that have arisen in order that solutions may be found Based on the studies reported here suggestions for improving the code are identified Bridge Traffic Loading Eugene OBrien, Andrzej Nowak, Colin Caprani, 2021-12-02 There is considerable uncertainty about what level of traffic loading bridges should be designed for Codes specify notional load models generally to represent extreme levels of normal traffic but these are often crude and have inconsistent levels of safety for different load effects Over the past few decades increasing quantities of reliable truck weight data has become available and it is now possible to calculate appropriate levels of bridge traffic loading both for specific bridges and for a road network Bridge Traffic Loading brings together experts from all over the world to deliver not just the state of the art of vertical loading but also to provide recommendations of best practice for all the major challenges in the field short span single and multi lane bridge loading dynamic allowance and long span bridges It reviews issues that continue to be debated such as which statistical distribution is most appropriate whether free flowing or congested traffic governs and dealing with future traffic growth Specialist consultants and bridge owners should find this invaluable as will regulators *Bridge Maintenance, Safety, Management and Life Extension* Airong Chen, Dan Frangopol, Xin Ruan, 2014-05-27 Bridge Maintenance Safety Management and Life Extension contains the lectures and papers presented at IABMAS 2014 the Seventh International Conference on Bridge Maintenance Safety and Management IABMAS 2014 held in Shanghai China July 7 11 2014 This set consists of a book of abstracts and a DVD containing the full papers of 396 contributions presented at IABMAS 2014 including the T Y Lin Lecture nine Keynote Lectures and 386 technical papers from about 40 countries All major aspects of bridge maintenance safety management and life extension are addressed including advanced materials aging of bridges assessment and evaluation bridge codes bridge diagnostics bridge management systems damage identification design for durability deterioration modeling earthquake and accidental loadings
