Danner, 2018-12-17 From driverless cars to pilotless planes many functions that have previously required human labor can now be performed using artificial intelligence For businesses this use of AI results in reduced labor costs and even more important creating a competitive advantage How does one look at any organization and begin the work of automating it in sensible ways This book provides the blueprint for automating critical business functions of all kinds It outlines the skills and technologies that must be brought to bear on replicating human like thinking and judgment in the form of algorithms Many believe that algorithm design is the exclusive purview of computer scientists and experienced programmers This book aims to dispel that notion An algorithm is merely a set of rules and anyone with the ability to envision how different components of a business can interact with other components already has the ability to work in algorithms Though many fear that the use of automation in business means human labor will no longer be needed the

author argues that organizations will re purpose humans into different roles under the banner of automation not simply get rid of them He also identifies parts of business that are best targeted for automation This book will arm business people with the tools needed to automate companies making them perform better move faster operate cheaper and provide great lasting value to investors

Artificial Intelligence in Price Management. A Qualitative Assessment of Potentials, Risks and Impacts Lennard Heyder,2024-12-05 Master s Thesis from the year 2024 in the subject Business economics Information Management grade 1 0 Otto Beisheim School of Management Vallendar Chair of Strategy and Marketing course Price Management language English abstract This thesis explores the transformative role of Artificial Intelligence AI in price management focusing on its impact across the four key phases strategy analysis decision making and implementation as defined by Simon and Fassnacht The motivation for this research arises from a gap in existing literature no conceptual framework currently addresses AI s specific impacts on each phase of the price management process The primary aim is to assess AI s influence including opportunities risks and structural changes within each phase Two research questions guide this study What phase specific value propositions and risk factors will AI introduce in each of the four price management phases How can these impacts be synthesized into a comprehensive decision making framework To address these questions a narrative literature review of recent studies 2022 2024 was conducted culminating in a structured framework This framework provides a cross industry overview of AI applications in pricing equipping organizations with a practical tool to evaluate their pricing strategies and make informed decisions about AI integration The framework presents a varied value risk profile across phases helping organizations identify where AI can best support pricing and where risks such as algorithmic bias and transparency issues require oversight A phased approach to AI adoption is recommended beginning with phases where AI supports human judgment to limit risk Higher levels of automation and decision authority can be introduced later to maximize efficiency and value provided there is a balanced approach to risk technological maturity and alignment with organizational goals
