Coordinates in Pictures R. M. Mair,2017-12-31 Coordinate geometry is an important part of algebra and statistics In algebra it can show direct indirect and geometric connections between two variables In statistics it can display trends and relationships between any sets of figures Unfortunately plotting coordinates is in itself not very interesting You can try and make it more acceptable by relating it to real life but this does not work too well with younger pupils As such the best way of getting pupils to practise their plotting of points is to connect it to something that they find enjoyable or produces an enjoyable end result Subsequently most of the exercises in this module produce a picture from the plotted points A significant advantage in this process for the teacher is a reduction in the amount of marking the coordinates picture being an answer for the plotting of a large number of points Therefore these sheets are effectively self marking the pupils gaining almost instant feedback from whether the picture is right or wrong The end product not only reinforces the pupils learning of the concept involved but also produces some great display work This set of photocopy masters is designed to make coordinates as enjoyable as possible The main emphasis is on the plotting of coordinate pairs as this needs to be an activity that should be as automatic as possible The later exercises concerning the plotting of straight lines from equations and the general form of a straight line are the areas most likely to be examined This module contains exercises up to the general equation of a straight line $y = mx + c$ but not non linear equations *Roberta Alexander Collection* ,1910 Collection contains clipping photograph and publicity files **Moving with Math** Caryl K.
