1.

Refer to the exhibit. A switch was configured as shown. A ping to the default gateway was issued, but the ping was not successful. Other switches in the same network can ping this gateway. What is a possible reason for this?

The default gateway address must be 192.168.10.1.

The ip default-gateway command has to be issued in the VLAN interface configuration mode.

The VLAN IP address and the default gateway IP address are not in the same network.

The no shutdown command was not issued for VLAN 1.

The local DNS server is not functioning correctly.

2.

While trying to solve a network issue, a technician made multiple changes to the current router configuration file. The changes did not solve the problem and were not saved. What action can the technician take to discard the changes and work with the file in NVRAM?
