# Working of Firewall as a Service security technology

This slide illustrates the working of Firewall-as-a-service technology. The purpose of this slide is to outline various actions performed by Firewall such as Intrusion Prevention Systems, DNS security, etc. Main components include accept, drop and block.

Firewall as a service (FWaaS)

- Positioned between corporate network and the public internet

- Defend company's architecture from cyberattacks by blocking incoming threats from entering network using a variety of filtering and security mechanisms

- **Actions Include –**
  - Intrusion prevention systems (IPS)
  - Complete event recording
  - Automatic actions in reaction to threat detection
  - Domain Name System (DNS) security

- Examine each block of data packets entering or leaving the internet or the host computer

- Consider three options depending on a set of security guidelines
