

# Processing the data file for a board game

## Problem statement

A software application is required for processing a data file describing a generic square board for a board game like *Snakes and Ladders*. A board comprises cells numbered from 1 to  $N_{max} = N^2$  which form a square with a square side formed by  $N$  cells. An example of such board is presented below.

The rules can be found at

<http://learnenglishkids.britishcouncil.org/en/crafts/snakes-and-ladders>

A data file includes the list of cells which represent a transition between the cells. Each transition is described by a pair of integer numbers where the first number is a current cell number and the second number is a cell number the current cell is connected to. The second number is provided with a sign which indicates the direction of such transition. A positive number means that the player ascends from the second cell to the current on a ladder. A negative number indicates that the player slides from the current cell to the one marked by a magnitude of the second number down to the bottom of the snake. The data file terminates by the number  $N_{max}$  followed by zero.

**Handbook of Research on Fostering Student Engagement With Instructional Technology in Higher Education** Alqurashi, Emtinan, 2019-10-11 Student engagement relies on the students and their willingness to participate in the learning process and can be enhanced through the application of various technologies within learning environments. However, strategies for implementing these technologies need research and development to be implemented effectively. The Handbook of Research on Fostering Student Engagement With Instructional Technology in Higher Education is a comprehensive academic publication that focuses on the engagement of learners with academics in higher education and especially how this engagement can be fostered with the integration of new technologies. Featuring an array of topics such as gamification, digital literacy, and social networking, this book is ideal for instructors, educators, administrators, curriculum developers, instructional designers, IT consultants, educational software developers, researchers, academicians, and students.

Building upon and extending Ian Bogost's definition of procedural rhetoric and Jesper Juul's definition of games, Morris extends the usage of the term into human systems and groups that have proceduralized their arguments online. By studying the development of online adhocracies such as 4Chan Anonymous and even Reddit during their early development, roughly 2006 to 2014, Morris shows how these groups have proceduralized rhetoric so that thousands of group members can speak with a single voice and singular name that they call anonymous. Morris examines these techniques to reveal their function and purpose as rhetoric. Understanding how internet arguments work can also positively affect pedagogy, especially now as social media and memes have been used to influence national elections, our views of the news, and our views of each other. Can we continue to teach only traditional rhetoric in classrooms when students will face rhetorical tropes and logic in their personal and professional lives? *THE INTERNET AS A GAME* shows why the stakes are high and the answer to this question is no. *ECGBL 2019 13th European Conference on Game-Based Learning* Lars Elbæk, Gunver Majgaard, Andrea Valente, Saifuddin Khalid, 2019-10-03 A Parent's Guide to School Projects Kathie Weir, 2002-04 Shows parents how to help their children with a wide variety of school projects ranging from the simple to the complex. **The Power of Problem Solving** Juanita S.
