

Checking Shift Cable Adjustments on MerCruiser 120-thru-260R & MR Models

It is the boat manufacturer's responsibility to adjust the shift cables. It is the dealer's responsibility to make sure that this has been done correctly before delivering the boat. The following procedure should be used to check for proper adjustment.

1. Shift operation can be checked with boat in the water or with stern drive connected to a garden hose.
2. Shift into forward and reverse gear making sure that clutch engages before engine begins to accelerate.
3. Shift into forward gear and stop engine. Fully advance throttle. Check that shift cutout switch roller is centered in notch of shift lever. (Figure 1) Repeat same procedure for reverse gear.
4. If proper shift operation is not observed, adjust shift cables, as outlined in "MerCruiser I-Drive Shift Cable Installation and Adjustment Procedure" (SIS-673), which was sent out with the previous service bulletin mailing.

Difficult Shift Cable Adjustment

If difficulty is experienced in obtaining proper shift cable adjustment, the following items should be checked in sequence given:

1. **Remote Control Shift Cable Travel**
Remote control must provide the shift cable travel shown in Figure 2 to properly shift the drive unit. Pull out on cable end guide when checking dimension in forward gear and push in on end guide when checking dimension in reverse gear.
