**Computational Biology in Drug Discovery and Repurposing** Rajani Sharma,A. V. Senthil Kumar,Kunal Kumar,2024-08-16 This new book takes an in depth look at the emerging and prospective field of computational biology and bioinformatics which possesses the ability to analyze large accumulated biological data collected from sequence analysis of proteins and genes and cell population with an aim to make new predictions pertaining to drug discovery and new biology The book explains the basic methodology associated with a bioinformatics and computational approach in drug designing It then goes on to cover the implementation of computational programming bioinformatics pharmacophore modeling biotechnological techniques and pharmaceutical chemistry in designing drugs The major advantage of intervention of computer language or programming is to cut down the number of steps and costs in the field of drug designing reducing the repeating steps and saving time in screening the potent component for drug or vaccine designing The book describes algorithms used for drug designing and the use of machine learning and AI in drug delivery and disease diagnosis which are valuable in clinical decision making The implementation of robotics in different diseases like stroke cancer COVID 19 etc is also addressed Topics include machine learning AI databases in drug design molecular docking bioinformatics tools target based drug design and immunoinformatics chemoinformatics and nanoinformatics in drug design Drug repurposing in drug design in general as well as for specific diseases including cancer Alzheimer s disease tuberculosis COVID 19 etc is also addressed in depth     Virtual Drug Design Daniela Schuster,Honglin Li,2020-01-13 In the current drug research environment in academia and industry cheminformatics and virtual screening methods are well established and integrated tools Computational tools are used to predict a compound s 3D structure the 3D structure and function of a pharmacological

target ligand target interactions binding energies and other factors essential for a successful drug. This includes molecular properties such as solubility logP value susceptibility to metabolism cell permeation blood brain barrier permeation interaction with drug transporters and potential off target effects. Given that approximately 40 million unique compounds are readily available for purchase such computational modeling and filtering tools are essential to support the drug discovery and development process. The aim of all these calculations is to focus experimental efforts on the most promising candidates and exclude problematic compounds early in the project. In this Research Topic on virtual activity predictions we cover several aspects of this research area such as historical perspectives data sources ligand treatment virtual screening methods hit list handling and filtering.
