

PLUMBING MATHEMATICS

A review of basic fundamentals of mathematics is essential to successful applications of plumbing principals. An acceptable reference that may be used during your examination is **Mathematics for Plumbers and Pipefitters**. The first six units contained in this reference will summarize these basic principals. If, after review of these six units, you still have difficulty in understanding the terms, formulas and principals used, further study must be considered.

In solving all mathematical problems you should follow the pattern of steps listed below:

STEP 1: Write the applicable formula.

STEP 2: Substitute the numerical value for each symbol in the formula.

STEP 3: Change values to like units, for example: all to feet or all to inches, with the exception of grade and drop formulas.

STEP 4: Solve the problem and label your answers, that is: feet, inches, gallons, etc.

A practical example using the preceding pattern of steps is as follows:

EXAMPLE: What is the area of a roof 120 inches wide and 20 feet 6 inches long?

(A) 200 square feet

(C) 210 square feet

(B) 205 square feet

(D) 215 square feet

STEP 1: Rectangle formula: Area = Length x Width ($A = L \times W$)

120"

$A = LW$

20' 6"

STEP 2: Area = 2' 6" X [120" / 12"] or 10'

STEP 3: Area = 20.5' x 10'

Note: Since you will be using a calculator, your answer will often be in the form of a decimal. The answers on the examination may be given as a decimal or a fraction so you must change your decimal to a fraction in some cases.

STEP 4: 20.5' x 10' = 205 square feet. Area = 205 square feet.
Answer (B) 205 square feet.
