*Handbook of Surface Treatments and Coatings* Michel Cartier, 2003 In order to design and manufacture improved products that have a competitive edge in the global market it is important to be able to produce surfaces that do not wear easily are more resistant to tarnishing and corrosion and retain their electrical optical or thermal properties over long periods of time This book brings together practical information on the selection and appropriate use of surface treatments and coatings in mechanical engineering The selection methods are based on in service properties and functions required It provides a wealth of knowledge and expertise in an easily accessible way Comprehensive and up to date Highly illustrated with many color photographs Includes industry examples of problems encountered with effective solutions Written with the practitioner in mind An indispensable guide for practicing engineers and designers tackling the universal problems of friction and wear from the perspective of both prevention and cure as well as for the manufacturers and suppliers of coatings and related equipment Translated from the French edition published by the HEF Groupe HEF is an independent organization founded in 1953 specializing in surface mechanics treatments and coatings and offering technical advice and solutions to industry It has published widely in this area

**The Complete Technology Book on Electroplating, Phosphating, Powder Coating And Metal Finishing** NIIR Board, 2005-10-04 Electroplating and Metal Finishing concerns itself with the development and applications of composites and non metallic coatings These coatings are used for decorative protective and functional application Some of the other common metal surface finishing technologies are phosphating pickling electroforming powder coating etc Electroplating is the process of applying a metallic coating to an article by passing an electric current through an electrolyte in contact with the article thereby forming a surface having properties or dimensions different from those of the article Metal finishing has now come to be known as surface engineering Surface engineering techniques are generally used to develop a wide range of functional properties In addition to the decorative aspects metal finishing aids the protection of metals and alloys from corrosion and rusting A great potential exists for development of new materials involving for example coatings of metals composites particle incorporated anodic coatings and even films of sapphire like materials porous films of niobium etc and coating of refractory metals like molybdenum and tungsten Phosphate coatings have a wide field of application in manufacturing industry both as an aid to mechanical production operations and in surface finishing The major applications for phosphate treatments fall into four areas pre treatment prior to organic coatings protection against corrosion anti wear coatings and phosphating as a production aid Powder coating of aluminium extrusions in particular has become an important feature in the finishing of aluminium There are several advantages of powder powder coating overspray can be recycled and thus it is possible to achieve nearly 100% use of the coating powder powder production lines produce less hazardous waste than conventional liquid coatings capital equipment and operating costs for a powder line are generally less than for conventional liquid lines Surface finishing is a broad range of industrial processes that

alter the surface of a manufactured item to achieve a certain property Currently the trend is towards surface treatments Industries in developing countries like India have to be increasingly aware of the need not only for up gradation of existing technologies but also for indigenization of new technologies on a time bound basis The content of the book includes information about technology involved in surface engineering of metals some of them are electroplating plant barrel planting plant electroplating equipment cleaning pickling and dipping equipment for hot alkaline cleaners electrolytic and chemical processes for the polishing of metals canning stainless steel electro polishing solution electroforming in gramophone record production silver plating fluoborate plating gold plating gilding cadmium plating zinc plating chemical finishing of aluminium powder coating of aluminium bright nickel electro plating copper plating etc This book covers an intensive study of technology of electroplating phosphating powder coating and metal finishing The first hand information on these technologies is dealt in the book and can be very useful for those looking for entrepreneurship opportunity in the said industry
