Substrate-Integrated Millimeter-Wave Antennas for Next-Generation Communication and Radar Systems Zhi Ning Chen, Xianming Qing, 2021-04-08 Substrate Integrated Millimeter Wave Antennas for Next Generation Communication and Radar Systems The first and only comprehensive text on substrate integrated mmW antenna technology state of the art antenna design and emerging wireless applications Substrate Integrated Millimeter Wave Antennas for Next Generation Communication and Radar Systems elaborates the most important topics related to revolutionary millimeter wave mmW technology Following a clear description of fundamental concepts including substrate integrated waveguides and loss analysis the text treats key design methods prototyping techniques and experimental setup and testing The authors also highlight applications of mmW antennas in 5G wireless communication and next generation radar systems Readers are prepared to put techniques into practice through practical discussions of how to set up testing for impedance matching radiation patterns gain from 24GHz up to 325 GHz and more This book will bring readers state of the art designs and recent progress in substrate integrated mmW antennas for emerging wireless applications Substrate Integrated Millimeter Wave Antennas for Next Generation Communication and Radar Systems is the first comprehensive text on the topic allowing readers to quickly master mmW technology This book Introduces basic concepts such as metamaterials Huygens s surface zero index structures and pattern synthesis Describes prototyping in the form of fabrication based on printed circuit board low temperature co fired ceramic and micromachining Explores applications for next generation radar and imaging systems such as 24 GHz and 77 GHz vehicular radar systems Elaborates design methods including waveguide based feeding network three dimensional feeding structure dielectric loaded aperture antenna element and low sidelobe synthesis The mmW is one of today s most important emerging technologies This book provides graduate students researchers and engineers with the knowledge they need to deploy mmW systems and develop new antenna designs with low cost low loss and low complexity

Microwave Technology Holger Heuermann, 2024-07-29 The book covers various numerical field simulation methods nonlinear circuit technology and its MF S and X parameters as well as state of the art power amplifier techniques It also describes newly presented oscillators and the emerging field of GHz plasma technology Furthermore it addresses aspects such as waveguides mixers phase locked loops antennas and propagation effects in combination with the bachelor s book High Frequency Engineering encompassing all aspects related to the current state of GHz technology **Self-Powered Cyber Physical Systems** Rathishchandra R. Gatti, Chandra Singh, Rajeev Agrawal, Felcy Jyothi Serrao, 2023-09-20 SELF POWERED CYBER PHYSICAL SYSTEMS This cutting edge new volume provides a comprehensive exploration of emerging technologies and trends in energy management self powered devices and cyber physical systems offering valuable insights into the future of autonomous systems and addressing the urgent need for energy efficient solutions in a world that is increasingly data driven and sensor rich This book is an attempt to aim at a very futuristic vision of achieving self powered

cyber physical systems by applying a multitude of current technologies such as ULP electronics thin film electronics ULP transducers autonomous wireless sensor networks using energy harvesters at the component level and energy efficient clean energy for powering data centers and machines at the system level This is the need of the hour for cyber physical systems since data requires energy when it is stored transmitted or converted to other forms Cyber physical systems will become energy hungry since the industry trend is towards ubiquitous computing with massive deployment of sensors and actuators This is evident in using blockchain technologies such as Bitcoin or running epochs for artificial intelligence AI applications Hence there is a need for research to understand energy patterns and distribution in cyber physical systems and adopt new technologies to transcend to self powered cyber physical systems This book explores the recent trends in energy management self powered devices and methods in the cyber physical world Written and edited by a team of experts in the field this book tackles a multitude of subjects related to cyber physical systems CPSs including self powered sensory transducers ambient energy harvesting for wireless sensor networks actuator methods and non contact sensing equipment for soft robots alternative optimization strategies for DGDCs to improve task distribution and provider profits wireless power transfer methods machine learning algorithms for CPS and IoT applications integration of renewables electric vehicles EVs smart grids RES micro grid and EV systems for effective load matching self powered car cyber physical systems anonymous routing and intrusion detection systems for VANET security data driven pavement distress prediction methods the impact of autonomous vehicles on industries and the auto insurance market Intelligent transportation systems and associated security concerns digital twin prototypes and their automotive applications farming robotics for CPS farming self powered CPS in smart cities self powered CPS in healthcare and biomedical devices cyber security considerations societal impact and ethical concerns and advances in human machine interfaces and explore the integration of self powered CPS in industrial automation Whether for the veteran engineer or student this volume is a must have for any library
