Today we will discuss about **CardView** in Android SDK which was introduced with the android material design through the **support v7 library**. We will show you how **CardView** can be implemented in a **RecyclerView** list. After reading this article you should feel comfortable creating Lists and Cards view in your android app.

CardView provides a more advanced and flexible way of implementing complex and custom listview with more functionality that is required nowadays for our apps.

We would be creating an Android CardView Example List app, where we will list **7 wonders of Modern World** along with a **Like** Button and a **Share** Button. On clicking the **Like** Button it will get highlighted and show a message. Clicking the **Share** Button will provide you options to share the photo of the Item you clicked. After completion, the app would look like as shown in the video.

Pre-requisites

1. Android Studio installed on your PC (Unix or Windows).
2. A real time android device (Smartphone or Tablet) configured with Android Studio.

applications as were the beginnings but over time we can go much further such as creating web and desktop applications for MacOS Linux Windows and also games using technologies such as Flame and or Forge2D In this book we want to give a practical approach to development In Flutter we know that there are many widgets in Flutter that we can use for our development but what is truly interesting is the possibility of being able to combine them so that they work together and have a true component that is responsible for perform a task such as displaying a custom header with various shapes a progress bar buttons with custom behaviors etc In the book we will see several of these developments and with this we want to achieve a deeper understanding of Flutter that of creating nested widgets or components which is the term used in the book We will also address other topics that you will surely consider of interest such as developing applications with multiple themes for example a dark theme and a light theme creating adaptive applications so that they can be viewed correctly on multiple devices depending on the size of the window and not simply stretched The topic of animations must also be recent in modern developments therefore we have a chapter focused on introducing how to use animations in Flutter of which we have several forms We will also apply it in the development of our components when necessary In this book we want to take a more practical approach creating components that are widely used in traditional development with Flutter such as custom headers with complex shapes using the Custom Painter knowing how to use and define our custom animations among other components or nested widgets that you will surely find it of interest In short it is a mostly practical book to create custom widgets and delve into parts of Flutter that are no longer so basic and as a Flutter developer you should know them About the Author This book was prepared by Andr s Cruz Yoris Graduate in Computing with more than 10 years of experience in the development of web applications in general I work with PHP Python and client side technologies such as HTML JavaScript CSS Vue among others and on the server side such as Laravel Flask Django and Codeigniter I am also a developer in Android Studio xCode and Flutter for creating native applications for Android and IOS I put at your disposal part of my learning reflected in each of the words that make up this book my sixteenth book on software development but the fourth book on the development of mobile desktop and web applications with Flutter in this case focused on Flutter for the creation of components and animations Who is this book for This book is aimed at anyone who wants to start delving deeper into application development with Flutter Therefore it is assumed that the reader has at least basic knowledge about how to use this technology such as knowing what the tool is for installing Flutter knowing its basic widgets and creating a basic application This book is intended for people who They want to know the framework in more detail by creating custom widgets and animals Want to improve an existing skill and continue scaling your path in app development with Flutter This book is for intermediate users in Flutter Map This book has a total of 6 chapters it is recommended that you read in the order in which they are arranged and as we explain the components of the framework go directly to practice replicate test and modify the codes that we show in this book Chapter 1 In this chapter we are going to learn the steps to create a project in

Flutter Chapter 2 In this chapter we are going to learn how to make animations in Flutter which consists of containers that apply smooth transitions when going from one state to another automatically when doing it manually using the AnimationController Chapter 3 In this chapter we are going to create several components or sets of nested widgets that are common in modern development such as buttons with special behaviors staggered grids expandable headers side menus among others Chapter 4 In this chapter we are going to learn how to use multi theming in the application for example having an application with the default theme and a dark mode Chapter 5 In this chapter we are going to learn about CustomPainter which are the HTML Canvas but in Flutter with them we will be able to build a large number of figures with great precision Chapter 6 In this chapter we are going to learn how we can create an adaptive application using the same source code on various devices with different screen sizes and that the content can be used from the application so that everything does not appear stretched on large screens The book is in development and will have more content in the future *Objektinis programavimas: teorija, Java 10, JavaFX* Mindaugas Macernis,2018-04-16 Knygoje objektiskai orientuota programavimo kalba pateikta detaliai su pilnais Java kodo pavyzdziais skirta tiek besidominantiems tiek besimokinantiems tiek norintiems tureti po ranka kad uzmesti aki Objektinis programavimo didelis patogumas yra kompozicinis programavimas bet pagrindine esme yra 4 principai paveldejimas abstrakcija polimorfizmas ir inkapsuliacija Java kalboje palaikomos placios polimorfizmo galimybes panaudojant daugybiniskuma Generics Nuo Java 10 polimorfizmas isplestas su zasinu baksnojimo galimybemis Nuo Java 9 inkapsuliacijos galimybes papildytos moduliu technologijomis Java kalba be objektinio programavimo galimybiu turi ir palaiko strukturinio programavimo galimybe nors ir pakankamai ribota Nuo Java 8 palaikomas funkcinis programavimas kuris naujesnese versijose su didesnemis galimybemis Java kalba turi aiskinimu Annotations programavimo technologija kuri uztikrina deklaratyvaus programavimo galimybe Daugiau http www javaknyga lt **Understanding Game Application Development** Vincent Maverick S.
