Composites is designed to be of value to working engineers. Its orientation is practical rather than theoretical although researchers and students will also find it to be a substantial source of worthwhile information. The 998 pages in this reference book are packed with real life how to do it information aimed at solving problems. There are 13 major sections containing 161 separate articles. The information is clear and concise yet complete. Ranging across a broad area of useful information about structural composites for engineering applications. Composites covers the subject completely and in depth. First constituent materials the fibres and matrix materials of which composites are made are described in detail. The forms in which they are available for use are reviewed in depth. Sections on analysis and design of both the basic composites and structures made from composites provide guidance for design and materials engineers. Articles on manufacturing processes cover them in a practical and helpful way. Whole sections on quality control testing and failure analysis round out the picture. Applications for and experience with composites are reported in a section that ranges across aircraft automotive marine and recreational applications. A final section on materials for special applications describes metal matrix ceramic and carbon carbon composites.

The form of radiation guide selected for analytical and experimental work is a cylindrical tube the length of which is essentially the distance through which it is required to transmit the energy for the specific application. To minimize the reflection losses inherent in a uniform cylinder the guide is provided with a parabolic entrance section. This is called the guide paraboloid to differentiate it from the main paraboloidal mirror. The parabolic entrance will redirect incident radiation axially in the tube. The initial

portion of the guide paraboloid section is modified to the form of a truncated cone to account for rays from the mirror rim and the edges of solar arc Author **Energy Research Abstracts** ,1987 Includes all works deriving from DOE other related government sponsored information and foreign nonnuclear information **Bibliography of Agriculture** ,1995 Soviet Physics, Uspekhi ,1966 Environmental Protection Emil T.
