The authors use the Federal Standard 1016 CELP MATLAB software to describe in detail several functions and parameter computations associated with analysis by synthesis linear prediction. The book begins with a description of the basics of linear prediction followed by an overview of the FS 1016 CELP algorithm. Subsequent chapters describe the various modules of the CELP algorithm in detail. In each chapter an overall functional description of CELP modules is provided along with detailed illustrations of their MATLAB implementation. Several code examples and plots are provided to highlight some of the key CELP concepts. It is written in a light but informative conversational style, weaving text, figures, mathematics, and lines of code into a cohesive narrative. Over 1600 code examples show how complex problems can be decomposed and solved using just a few simple lines of code. This edition is based on MATLAB and a number of MathWorks toolboxes. These provide a set of supported software tools for addressing a broad range of applications in robotics and computer vision. These toolboxes enable the reader to easily bring the algorithmic concepts into practice and work with real, non-trivial problems. For the beginning student, the book makes the algorithms accessible; the toolbox code can be read to gain understanding, and the examples illustrate how it can be used. The code can also be the starting point for new work for practitioners, students, or researchers by writing programs based on toolbox functions. Two co-authors from MathWorks have joined the writing team and bring deep knowledge of these MATLAB toolboxes and workflows Getting Started with Matlab Simulink and Arduino Agus Kurniawan, Getting started with Matlab Simulink and Arduino comprehensively explains how to use MATLAB and Simulink to perform Arduino simulation.
