evolving field *Handbook of Categorization in Cognitive Science* Henri Cohen, Claire Lefebvre, 2017-06-03 Handbook of Categorization in Cognitive Science Second Edition presents the study of categories and the process of categorization as viewed through the lens of the founding disciplines of the cognitive sciences and how the study of categorization has long been at the core of each of these disciplines The literature on categorization reveals there is a plethora of definitions theories models and methods to apprehend this central object of study The contributions in this handbook reflect this diversity For example the notion of category is not uniform across these contributions and there are multiple definitions of the notion of concept Furthermore the study of category and categorization is approached differently within each discipline For some authors the categories themselves constitute the object of study whereas for others it is the process of categorization and for others still it is the technical manipulation of large chunks of information Finally yet another contrast has to do with the biological versus artificial nature of agents or categorizers Defines notions of category and categorization Discusses the nature of categories discrete vague or other Explores the modality effects on categories Bridges the category divide calling attention to the bridges that have already been built and avenues for further cross fertilization between disciplines

Interaction Between Attention and Language Systems in Humans Ramesh Kumar Mishra, 2015-10-09 This original volume examines the interface between attentional and linguistic processes in humans from the perspectives of psycholinguistics and cognitive science It systematically explores how autonomy and automaticity are reflected during language processing in a variety of situations A true mechanistic explanation of how humans process language would require a complete understanding of the interface language has with important cognitive systems like attention memory as well as with vision Interdisciplinary work in this area has so far not been able to generate a substantial theoretical position on this issue This volume therefore looks at different language processing domains such as speaking listening reading as well as discourse and text processing to evaluate the role attention plays in such performances and also at how often linguistic inputs affect attentional processing In this sense it proposes that the attention language interface is bidirectional It also considers applied issues like language disorders bilingualism and illiteracy where the attention language interface seems especially relevant as a theoretical apparatus for research investigations Therefore this volume brings closer theoretical explanations from the language sciences and cognitive sciences It argues that language processing is multi modal in its very essence and many conceptual structures in language evolve out of a complex interplay among participating cognitive systems such as attention and memory supported by vision and audition
