1. The lower ends of the two hangers in Fig. 1-41 were at the same elevation before the loads were applied. The horizontal member is of uniform cross section. Find the value of length l if the horizontal member (assumed to be rigid) is horizontal after all loads are acting.
Ans. $l = 38.3$ in.

Figure 1-41 Problem 1.

Solution: To solve this problem we will need to draw a free body diagram as shown below:

Fundamentals of Engineering High-Performance Actuator Systems Kenneth Hummel, 2016-12-01 Actuators are the key to allowing machines to become more sophisticated and perform complex tasks that were previously done by humans providing motion in a safe controlled manner As defined in this book actuator design is a subset of mechanical design It involves engineering the mechanical components necessary to make a product move as desired Fundamentals of Engineering High Performance Actuator Systems by Ken Hummel was written as a text to supplement actuator design courses and a reference to engineers involved in the design of high performance actuator systems It highlights the design approach and features what should be considered when moving a payload at precision levels and or speeds that are not as important in low performance applications The main areas covered in this book are Fundamentals of actuator design Actuator performance Loads that the actuator and its surrounding structure must accommodate Constraints which determine the type of load the actuator needs to accommodate The design margin applied to components of any given design Environment which must include the interactions between product and the conditions it will have to perform under Component strength to ensure safety from failure Component stiffness Maintainability Reliability Cost Design of Machine Elements Merhyle Franklin Spotts, 1985 This volume focuses on the design calculations for universal mechanical elements Introduction to Optimum Design Jasbir Singh Arora, 2016-04-05 Introduction to Optimum Design Fourth Edition carries on the tradition of the most widely used textbook in engineering optimization and optimum design courses It is intended for use in a first course on engineering design and optimization at the undergraduate or graduate level in engineering departments of all disciplines with a primary focus on mechanical aerospace and civil engineering courses Through a basic and organized approach the text describes engineering design optimization in a rigorous yet simplified manner illustrates various concepts and procedures with simple examples and demonstrates their applicability to engineering design problems Formulation of a design problem as an optimization problem is emphasized and illustrated throughout the text using Excel and MATLAB as learning and teaching aids This fourth edition has been reorganized rewritten in parts and enhanced with new material making the book even more appealing to instructors regardless of course level Includes basic concepts of optimality conditions and numerical methods that are described with simple and practical examples making the material highly teachable and learnable Presents applications of optimization methods for structural mechanical aerospace and industrial engineering problems Provides practical design examples that introduce students to the use of optimization methods early in the book Contains chapter on several advanced optimum design topics that serve the needs of instructors who teach more advanced courses Catalogue of Title-entries of Books and Other Articles Entered in the Office of the Librarian of Congress, at Washington, Under the Copyright Law ...
