For decades American cities have experimented with ways to remake themselves in response to climate change These efforts often driven by grassroots activism offer valuable lessons for transforming the places we live In *From the Ground Up* Local Efforts to Create Resilient Cities design expert Alison Sant focuses on the unique ways in which US cities are working to mitigate and adapt to climate change while creating equitable and livable communities She shows how from the ground up we are raising the bar to make cities places in which we don t just survive but where all people have the opportunity to thrive The efforts discussed in the book demonstrate how urban experimentation and community based development are informing long term solutions Sant shows how US cities are reclaiming their streets from cars restoring watersheds growing forests and adapting shorelines to improve people s lives while addressing our changing climate The best examples of this work bring together the energy of community activists the organization of advocacy groups the power of city government and the reach of federal environmental policy Sant presents 12 case studies drawn from research and over 90 interviews with people who are working in these communities to make a difference For example advocacy groups in Washington DC are expanding the urban tree canopy and offering job training in the growing sector of urban forestry In New York transit agencies are working to make streets safer for cyclists and pedestrians while shortening commutes In San Francisco community activists are creating shoreline parks while addressing historic environmental injustice *From the Ground Up* is a call to action When we make the places we live more climate resilient we need to acknowledge and address the history of social and racial injustice Advocates non profit organizations community based groups and government officials will find examples of how to build alliances to support and embolden this vision together Together we can build cities that will be resilient to the challenges ahead      *Advancing Knowledge on Cyanobacterial Blooms in Freshwaters* Elisabeth (Savi) Vardaka ,Konstantinos Ar. Kormas,2020-11-13 Cyanobacterial blooms are a water quality problem that is widely acknowledged to have detrimental ecological and economic effects in drinking and recreational water supplies and fisheries There is increasing evidence that cyanobacterial blooms have increased globally and are likely to expand in water resources as a result of climate change Of most concern are cyanotoxins along with the mechanisms that induce their release and determine their fate in the aquatic environment These secondary metabolites pose a potential hazard to human health and agricultural and aquaculture products that are intended for animal and human consumption therefore strict and reliable control of cyanotoxins is crucial for assessing risk In this direction a deeper understanding of the mechanisms that determine cyanobacterial bloom structure and toxin production has become the target of management practices This Special Issue entitled *Advancing Knowledge on Cyanobacterial Blooms in Freshwaters* aims to bring together recent multi and interdisciplinary research from the field to the

laboratory and back again driven by working hypotheses based on any aspect of mitigating cyanobacterial blooms from ecological theory to applied research     *Oregon Administrative Rules Compilation* ,2015     *Oregon's Agricultural Progress* ,2006     *Compendium of Forest Hydrology and Geomorphology in British Columbia* Robin G.
