Earthquakes in Human History Jelle Zeilinga de Boer, Donald Theodore Sanders, 2021-08-10 On November 1 1755 All Saints Day a massive earthquake struck Europe's Iberian Peninsula and destroyed the city of Lisbon Churches collapsed upon thousands of worshippers celebrating the holy day Earthquakes in Human History tells the story of that calamity and other epic earthquakes The authors Jelle Zeilinga de Boer and Donald Theodore Sanders recapture the power of their previous book *Volcanoes in Human History* They vividly explain the geological processes responsible for earthquakes and they describe how these events have had long lasting aftereffects on human societies and cultures Their accounts are enlivened with quotations from contemporary literature and from later reports In the chaos following the Lisbon quake

government and church leaders vied for control The Marquis de Pombal rose to power and became a virtual dictator As a result the Roman Catholic Jesuit Order lost much of its influence in Portugal Voltaire wrote his satirical work *Candide* to refute the philosophy of optimism the belief that God had created a perfect world And the 1755 earthquake sparked the search for a scientific understanding of natural disasters Ranging from an examination of temblors mentioned in the Bible to a richly detailed account of the 1906 catastrophe in San Francisco to Japan's Great Kanto Earthquake of 1923 to the Peruvian earthquake in 1970 the Western Hemisphere's greatest natural disaster this book is an unequalled testament to a natural phenomenon that can be not only terrifying but also threatening to humankind's fragile existence always at risk because of destructive powers beyond our control Earthquakes in London Ellis S. HILLMAN, 1967 **Thinking on Earthquakes in Early Modern Europe** Rienk Vermij, 2020-11-16 This book is the first extensive study of ideas on earthquakes before the Lisbon earthquake in 1755 The earthquake had a deep impact on European culture and the reactions to it stood in a long tradition that before this study had yet to be explored in detail *Thinking on Earthquakes* investigates both scholarly theories and views that were propagated among the early modern European population Through a chronological approach Vermij reveals that in contrast to the Ancient and medieval philosophers who suggested rational explanations for earthquakes supernatural ideas made a powerful comeback in the sixteenth century By analysing a variety of sources such as pamphlets sermons and treatises this study shows how changes in the ideas on earthquakes were a result of social and political demands as well as from improvements in the means of communication rather than from scientific methods Thus Vermij presents an illuminating case for the production of knowledge in early modern Europe A range of events are explored including the Ferrara earthquake in 1570 and the Vienna earthquake in 1590 making this study an invaluable source for students and scholars of the history of science and the history of ideas in early modern Europe **A History of British Earthquakes** Charles Davison, 1924 **Catalogue of the Earthquakes ... in Great Britain and Ireland During Historical Times** Joseph P. O'Reilly, 1884 **Studies of Historical Earthquakes in Southern Poland** Barbara Guterch, Jan Kozák, 2015-03-21 This book examines old and new data on some of the 18th and 19th century earthquakes that either occurred or were clearly felt in southern regions of Poland Particular emphasis is put on a detailed study and reinterpretation of the unusually severe Outer Western Carpathians earthquake on December 3 1786 7.0 5.3 Mw 35 km depth which was the last in a series of seismic events in the years 1785 and 1786 An assessment is also made of what we presently know about the seismicity of the Western Carpathians in Poland based on instrumental data The book also presents material relating to earthquakes of 6.9 10 that affected south Poland and the surrounding regions in Slovakia 1858 Gera in Thuringia 1872 the Sudetes on the Czech Polish border 1883 1901 and Lower Silesia Poland 1895 These are analyzed and illustrated by 17 contemporary macroseismic intensity maps some of which are considered to be remarkable for those times A new seismic catalog for Poland is provided with amendments and updates up to the end of 2014 Noteworthy is

the data on two unforeseen events one about 60 km NE of the Polish border in 2004 and one in central Poland in 2012 It shows how important it is not least for practical engineering purposes to perform seismic monitoring even in seemingly aseismic regions
