web translation is happening constantly in a normal bacterial cell just like it is in most of the cells of your body and it's key to  
keeping you and your bacterial visitors alive when you take certain antibiotics e.g. erythromycin the antibiotic molecule will  
latch onto key translation molecules inside of bacterial cells and basically

web about this chapter the flow of genetic information in cells from dna to mrna to protein is described by the central dogma

which states that genes specify the sequence of mrnas which in turn specify the sequence of amino acids making up all proteins the decoding of one molecule to another is performed by specific proteins and rnas
