6.1 Inverse Circular Functions

- Inverse Functions ■ Inverse Sine Function ■ Inverse Cosine Function
- Inverse Tangent Function ■ Other Inverse Circular Functions
- Inverse Function Values

Key Terms: one-to-one function, inverse function

Inverse Functions

For a function f , every element x in the domain corresponds to one and only one element y , or $f(x)$, in the range. This means the following:

1. If point (a, b) lies on the graph of f , then there is no other point on the graph that has _____ as _____ coordinate.
2. Other points may have _____ as _____ coordinate, however, because the definition of function allows _____ elements to be used more than once.

If a function is defined so that *each* _____ *element is used only* _____, then it is called a **one-to-one function**.

Horizontal Line Test

A function is one-to-one if every horizontal line intersects the graph of the function at most once.

Inverse Function

The **inverse function** of the one-to-one function f is defined as follows:

$$f^{-1} = \{ (y, x) \mid (x, y) \text{ belongs to } f \}$$

Do not confuse the -1 in f^{-1} with a negative exponent. The symbol $f^{-1}(x)$ represents the _____ of f , not $\frac{1}{f(x)}$.
