radio was a popular genre of young adult literature at the turn of the 20th century and an early form of social media. Before television and the Internet, books about plucky youths braving danger and adventure with the help of wireless communication brought young people together. They gathered in basements to build crystal sets. They built transmitters and talked to each other across neighborhoods, cities, and states. By 1920, there was music on the air, and boys and girls tuned in on homemade radios, often inspired by their favorite stories. This book analyzes more than 50 volumes of wireless and radio-themed fiction, offering a unique perspective on the world presented to young readers of the day. The values, attitudes, culture, and technology of a century ago are discussed, many of them still debated today, including immigration, gun violence, and guns on campus, race, bullying, and economic inequality.

Lee de Forest Mike Adams, 2011-10-17 The life-long inventor Lee de Forest invented the three-element vacuum tube used between 1906 and 1916 as a detector, amplifier, and oscillator of radio waves. Beginning in 1918, he began to develop a light valve, a device for writing and reading sound using light patterns. While he received many patents for his process, he was initially ignored by the film industry. In order to promote and demonstrate his process, he made several hundred sound short films; he rented space for their showing, he sold the tickets, and he did the publicity to gain audiences for his invention. Lee de Forest officially brought sound to film in 1919. Lee De Forest, King of Radio, Television, and Film is about both invention and early film making by de Forest as the scientist and producer, director, and writer of the content. This book tells the story of de Forest's contribution in changing the history of film through the incorporation of sound. The text includes primary source historical material, U.S. patents, and richly illustrated photos of Lee de Forest's experiments. Readers will greatly benefit from an understanding of the transition from silent to audio motion pictures, the impact this had on the scientific community, and the popular culture, as well as the economics of the entertainment industry.

Encyclopedia of Radio 3-Volume Set Christopher H. Sterling, 2004-03 Produced in association with the Museum of Broadcast Communications in Chicago, the Encyclopedia of Radio includes more than 600 entries covering major countries and regions of the world, as well as specific programs and people, networks and organizations, regulation and policies, audience research, and radio's technology. This encyclopedic work will be the first broadly conceived reference source on a medium that is now nearly eighty years old, with essays that provide essential information on the subject, as well as comment on the significance of the particular person, organization, or topic being examined.
