

Chapter 9

Prospective Analysis

REVIEW

Prospective analysis is the final step in the financial statement analysis process. It includes forecasting of the balance sheet, income statement and statement of cash flows. Prospective analysis is central to security valuation. Both the free cash flow and residual income valuation models described in Chapter 1 require estimates of future financial statements. We provide a detailed example of the forecasting process to project the income statement, the balance sheet, and the statement of cash flows. We describe the relevance of forecasting for security valuation and provide an example utilizing forecasted financial statements to implement the residual income valuation model. We discuss the concept of value drivers and their reversion to long-run equilibrium levels. In the appendix, we provide a detailed example of short-term cash flow forecasting.
