CHAPTER 8

BASIC COST MANAGEMENT CONCEPTS

Chapter 1 indicated that managerial accounting deals with the information managers need for making decisions and for planning and performance evaluation. From an accounting point of view, this information often relates to the costs of the organization.

Nature of Cost, Cost Pools, Cost Objects and Cost Drivers**Cost**

At the most basic level, a cost may be defined as the value foregone or sacrifice of resources for the purpose of achieving some economic benefit which will promote the profit-making ability of the firm. A cost is incurred when a resource is used for some purpose. It is also an outlay or expenditure of money to acquire goods and services that assist in performing operations.

In managerial accounting, the term cost may be used in different ways because there are many types of costs that may be classified differently according to the immediate needs of management. For instance, external financial reports require the use of historical cost data whereas decision making may require current cost data.

Accounting costs are classified in numerous ways. To prepare financial statements, accountants must associate costs with specific time periods. The costs are classified differently depending on the type of organization involved, that is, merchandising, service, or manufacturing.

Cost data that are classified and recorded in a particular way for one purpose may be inappropriate for another use.

Cost Pools

Cost pools are costs collected into meaningful groups. Cost pools may be classified

- (1) by type of cost (labor cost in one pool, materials costs in another)
 - (2) by source (department 1, department 2 and so on)
 - (3) by responsibility (manager 1, manager 2 and so on)
- and many more.

Basic Cost Accounting Concepts Henry R. Anderson, Mitchell H. Raiborn, 1977 Ebook: Managerial Accounting - Global Edition Ronald Hilton, David Platt, 2014-09-16 We are pleased to present this Global Edition which has been developed specifically to acquaint students of business with the fundamental tools of managerial accounting and to promote their understanding of the dramatic ways in which business is changing. The emphasis is on teaching students to use accounting information to best manage an organization. Each chapter is written around a realistic business or focus company that guides the reader through the topics of that chapter. There is significant coverage of contemporary topics such as activity based costing, target costing, the value chain, customer profitability analysis, and throughput costing, while also including traditional topics such as job order costing, budgeting, and performance evaluation. Many of the real world examples in the Management Accounting Practice boxes have been revised and updated to make them more current, and several new examples have been added. This Global Edition has been adapted to meet the needs of courses outside the United States and does not align with the instructor and student resources available with the U.S. edition.

MANAGEMENT ACCOUNTING Suryadharma Sim, SE., M. Ak., CIBA., CPIR., CPHRM., HRBP., HRMP., CAPM., CAPF., CERA., CBV, Islamiah Kamil SE, M. Ak., CAPM., CAPF, 2024-09-14 Managerial accounting is the process of identifying, measuring, analyzing, interpreting, and communicating information in pursuit of an organization's goals. Managerial accounting is an integral part of the management process, and managerial accountants are important strategic partners in an organization's domestic and international management teams. Managerial accounting provides the essential data with which the organizations are actually run. Managerial accounting is also termed as management accounting or cost accounting. Financial accounting provides the scorecard by which a company's overall past performance is judged by outsiders. Managerial accountants prepare a variety of reports. Some reports focus on how well managers or business units have performed, comparing actual results to plans and to benchmarks.
