Chapter 1. *Introduction to Computing*

The electronic computer is one of the most important developments of the twentieth century. Like the industrial revolution of the nineteenth century, the computer and the information and communication technology built upon it have drastically changed business, culture, government and science, and have touched nearly every aspect of our lives. This text introduces the field of computing and details the fundamental concepts and practices used in the development of computer applications.

Entering into a new field like computing is a bit like going to work in a country that you have never visited before. While all countries share some fundamental features such as the need for language and propensities for culture and trade, the profound differences in these features from one country to the next can be disorienting and even debilitating for newcomers. Further, it's difficult to even describe the features of a given country in any definitive way because they vary from place to place and they change over time. In a similar way, entering the field of computing can be disorienting and finding clear definitions of its features can be difficult.

Still, there are fundamental concepts that underlie the field of computing that can be articulated, learned and deployed effectively. All computing is based on the coordinated use of computer devices, called *hardware*, and the computer programs that drive them, called *software*, and all software applications are built using data and process specifications, called *data structures* and *algorithms*. These fundamentals have remained remarkably stable over the history of computing, in spite of the continual advance of the hardware and software technologies, and the continual development of new paradigms for data and process specifications.

This chapter defines the notion of computing, discusses the concepts of hardware and software, and concludes with an introduction to the development of software, called computer *programming*. The remainder of the text focuses in on the development of computer software, providing a detailed discussion of the principles of software as well as a snapshot of the current culture of the software development field. Processing, a Java-based development environment, is used throughout the first half of the text; the text then transitions to use of the full Java development environment.

1.1. Computing

As noted above, the definition of computing is hard to pin down, but the *Computing Curricula 2005: The Overview Report* prepared by a joint committee of ACM, IEEE, and AIS gives the following definition: "In a general way, we can define computing to mean any goal-oriented activity requiring, benefiting from, or creating computers.‖ This is a very broad definition that comprises the development of computer hardware, the use of computer applications, and the development of computer software. This text focuses on the last of these enterprises, the development of computer software.

Because software development is based on computer hardware, this chapter will discuss the general

Introduction to Computer Engineering Taylor L. Booth,1984 A one semester undergraduate course stressing the use of information transfer concepts necessary to analysis and design of modern digital systems It is organized to provide an integrated overview of the various classes of digital information processing systems and devices and the interrelationship between the hardware and software techniques that can be used to solve problems *COMPUTER VISION: IMAGE RECOGNITION AND ANALYSIS TECHNIQUES* Prof. Munindra Lunagaria,Mr. Yogesh Kumar Podapati,Dr. Sheshang D. Degadwala,Saikumar Tara,2023-07-04 Computer vision is what we call the practice of using computer based imaging where there is no human interaction in the visual loop at any point in the process The photos are analyzed by a computer which then takes appropriate action depending on their results Computer vision systems are used in a variety of medical disciplines and the only thing that can be said with absolute confidence is that the scope of these systems applications will continue to expand in the future is the only thing that can be declared with absolute certainty processing one or more digital photographs in order to generate valuable inferences about real world physical objects and situations by computing the features of the 3D environment This processing may be done with either one picture or all of them together generating an accurate and comprehensive description of a real world object based on a photograph of that thing The discipline of computer vision came into being as a consequence of efforts to model image processing utilizing the several approaches that are accessible within the discipline of machine learning The field of computer vision makes use of machine learning to search for patterns in images with the end goal of deciphering such patterns The field of computer vision entails the practice of teaching computers to recognize objects based on the digital still photos or moving movies that are sent into them Finding methods through which jobs can be automated that now rely on the human visual system is the objective here Image processing is one of the various methods that are utilized in the execution of this approach The subfield of artificial intelligence AI known as computer vision is an absolutely necessary component in order for computers and other types of systems to be able to respond or provide suggestions based on visual data such as digital photos movies and other types of inputs The same way that artificial intelligence makes it possible for computers to think computer vision makes it possible for computers to see comprehend and observe Computer vision and human vision are functionally comparable the primary difference is that human eyesight developed far earlier than computer vision The capacity of human beings to learn to differentiate between different things their distances from one another whether or not the items are moving **Computer Graphics & Multimedia Applications** Sandeep Aggarwal [Author], **Java** Walter J.
