

## 11.3 Other Patterns of Inheritance

### Lesson Summary

**Beyond Dominant and Recessive Alleles** Some alleles are neither dominant nor recessive:

- ▶ In cases of **incomplete dominance**, neither allele is completely dominant over the other. The phenotype is a blend of the two homozygous phenotypes.
- ▶ In cases of **codominance**, both alleles in the heterozygous genotype are expressed in the phenotypes.
- ▶ Genes with **multiple alleles** have more than two forms of the same gene. There may be more than one dominant form and several different phenotypes.
- ▶ **Polygenic traits** are controlled by the interaction of two or more genes and exhibit a wide range of phenotypes.

**Genes and the Environment** The phenotype of an organism results only partly from its genotype. Environmental conditions can affect how genes are expressed.
