Chapters 11 - End of chapter Study Questions

11.2 What are the problems in measuring the unemployment rate? In what ways does the official ABS measure of the unemployment rate understate the true degree of unemployment? In what ways might the official ABS measure overstate the true degree of unemployment?

11.2 There are some problems with measuring the unemployment rate: (a) discouraged workers are measured as 'not in the labour force'; (b) people are measured as being employed even if they are working only one hour per week, which means the official measure of unemployment does not account for under-employment; and (c) some people claim to be unemployed but they are not.

The ABS measure of the unemployment rate understates the true degree of unemployment to the extent that it does not count discouraged workers as unemployed because they have stopped looking for a job, and it counts involuntary part-time workers as employed even though these workers would prefer to work more hours. The official measure overstates the true degree of unemployment because (1) some people claim to be actively looking for work but are not because they are embarrassed or think they will not remain eligible for government payments to the unemployed and (2) some people have jobs in the underground economy although they claim to be unemployed.

11.5 Briefly describe the economic costs to the economy that result from unemployment.

11.5 The costs to the economy include the loss of GDP, loss or deterioration of human capital and retraining costs. Note that unemployment benefits are not a loss to the economy but a transfer payment from those paying taxes to those on benefits. They do, however, represent an opportunity cost in terms of government expenditure. Some argue that there are external costs to society due to unemployment, such as increased crime and increased health expenditure.

11.8 Outline the three main types of unemployment.

11.8 The three main types of unemployment are frictional unemployment, structural unemployment and cyclical unemployment.

Frictional unemployment is short-term unemployment that arises from the process of matching workers with jobs.

Structural unemployment is unemployment that arises from a persistent mismatch between the skills and attributes of workers and the requirements of jobs.

Cyclical unemployment is unemployment caused by a business cycle contraction or recession.
