VLSI Consortium,1984 **VLSI Design: Circuits, Systems and Applications** Jie Li,A Ravi Sankar,P Augusta Sophy Beulet,2018-01-02 This book gathers a collection of papers by international experts presented at the International Conference on NextGen Electronic Technologies ICNETS2 2017 which cover key developments in the field of electronics and communication engineering ICNETS2 encompassed six symposia covering all aspects of the electronics and communications domains including relevant nano micro materials and devices This book showcases the latest research in very large scale integration VLSI Design Circuits Systems and Applications making it a valuable resource for all researchers professionals and students working in the core areas of electronics and their applications especially in digital and analog VLSI circuits and systems VLSI Design Methodologies for Digital Signal Processing Architectures Magdy A. Bayoumi,2012-12-06 Designing VLSI systems represents a challenging

task It is a transformation among different specifications corresponding to different levels of design abstraction behavioral structural and physical The behavioral level describes the functionality of the design It consists of two components static and dynamic The static component describes operations whereas the dynamic component describes sequencing and timing The structural level contains information about components control and connectivity The physical level describes the constraints that should be imposed on the floor plan the placement of components and the geometry of the design Constraints of area speed and power are also applied at this level To implement such multilevel transformation a design methodology should be devised taking into consideration the constraints limitations and properties of each level The mapping process between any of these domains is non isomorphic A single behavioral component may be transformed into more than one structural component Design methodologies are the most recent evolution in the design automation era which started off with the introduction and subsequent usage of module generation especially for regular structures such as PLA s and memories A design methodology should offer an integrated design system rather than a set of separate unrelated routines and tools A general outline of a desired integrated design system is as follows Decide on a certain unified framework for all design levels Derive a design method based on this framework Create a design environment to implement this design method
