*Ecological Economics* Herman E. Daly, Herman E. Daly And Joshua Farley, 2004 This is the only stand alone volume that offers a complete explanation of both the theory and practice of ecological economics      **Ecological Economics, Second Edition** Herman E. Daly, Joshua Farley, 2011-01-26 In its first edition this book helped to define the emerging field of ecological economics This new edition surveys the field today It incorporates all of the latest research findings and grounds economic inquiry in a more robust understanding of human needs and behavior Humans and ecological systems it argues are inextricably bound together in complex and long misunderstood ways According to ecological economists conventional economics does not reflect adequately the value of essential factors like clean air and water species diversity and social and generational equity By excluding biophysical and social systems from their analyses many conventional economists have overlooked problems of the increasing scale of human impacts and the inequitable distribution of resources This introductory level textbook is designed specifically to address this significant flaw in economic thought The book describes a relatively new transdiscipline that incorporates insights from the biological physical and social sciences It provides students with a foundation in traditional neoclassical economic thought but places that foundation within an interdisciplinary framework that embraces the linkages among economic growth environmental degradation and social inequity In doing so it presents a revolutionary way of viewing the world The second edition of *Ecological Economics* provides a clear readable and easy to understand overview of a field of study that continues to grow in importance It remains the only stand alone textbook that offers a complete explanation of theory and practice in the discipline      **Ecological Economics** Herman E. **Resource Efficiency Complexity and the Commons** Bruce Lankford, 2013-09-05 The efficient use of natural resources is key to a sustainable economy and yet the complexities of the physical aspects of resource efficiency are poorly understood In this challenging book the author proposes a major advance in our understanding of this topic by analysing resource efficiency and efficiency gains from the perspective of common pool resources applying this idea particularly to water resources and its use in irrigated agriculture The author proposes a novel concept of the paracommons through which the savings of increased resource efficiency can be viewed In effect he asks who gets the gain of an efficiency gain By reusing economising and avoiding losses wastes and wastages freed up resources are available for further use by four destinations the same user parties directly connected to that user the wider economy or returned to the common pool The paracommons is thus a commons of and competition for resources salvaged by changes to the efficiency of natural resource systems The idea can be applied to a range of resources such as water energy forests and high seas fisheries Five issues are explored the complexity of resource use efficiency the uncertainty of efficiency interventions and outcomes destinations of freed up losses wastes and wastages implications for resource conservation and the interconnectedness of users and systems brought about by efficiency changes The book shows how these ideas put efficiency on a par with other dimensions of resource governance and sustainability such as equity justice resilience and access

**True Cost Accounting for Food** Barbara Gemmill-Herren, Lauren E. Baker, Paula A. Daniels, 2021-06-22 This book explains how True Cost Accounting is an effective tool we can use to address the pervasive imbalance in our food system Calls are coming from all quarters that the food system is broken and needs a radical transformation A system that feeds many yet continues to create both extreme hunger and diet related diseases and one which has significant environmental impacts is not serving the world adequately This volume argues that True Cost Accounting in our food system can create a framework for a systemic shift What sounds on the surface like a practice relegated to accountants is ultimately a call for a new lens on

the valuation of food and a new relationship with the food we eat starting with the reform of a system out of balance From the true cost of corn rice and water to incentives for soil health the chapters economically compare conventional and regenerative more equitable farming practices in and food system structures including taking an unflinching look at the true cost of cheap labour Overall this volume points towards the potential for our food system to be more human centred than profit centred and one that has a more respectful relationship to the planet It sets forth a path forward based on True Cost Accounting for food This path seeks to fix our current food metrics in policy and in practice by applying a holistic lens that evaluates the actual costs and benefits of different food systems and the impacts and dependencies between natural systems human systems agriculture and food systems This volume is essential reading for professionals and policymakers involved in developing and reforming the food system as well as students and scholars working on food policy food systems and sustainability
