

Once all fasteners have been removed, the cooling unit is ready to pull. A pry bar under the "big tube", as in the graphic below, will usually do the job. The "big tube" is the only pipe that should be pried on. Since you will be prying against the refrigerator body, a board or some other protection is necessary between the pry bar and the refrigerator to prevent poking a hole in the box. This is usually enough to pull a cooling unit, but not always. If yours is stubborn, peel up the edges of the aluminum backing paper to expose a line between the foam of the cooling unit head and the insulating foam of the refrigerator box. If the cooling unit has already been replaced before, the backing may be a piece of sheetmetal instead of paper. With some effort, the sheetmetal can be removed and slid out from the cooling unit. Running a large knife around the line between the two foams of the cooling unit and box (about 4" deep) and then prying as before will remove the more difficult units. If you're still having problems, go back and be sure you have removed all fasteners.

Once the cooling unit is out, remove the screws from the aluminum fins and pry them off the cooling unit head. Pull the baffle from the cooling unit chimney and remove any other parts from the unit. These parts will be transferred to the replacement cooling unit. Not transferring the baffle from the old unit to the new one is the most common mistake made by installers. Be sure you are familiar with what the baffle is. You're now done with the removal. Note: there is usually a clear plastic sheeting between the foam of the cooling unit head and the foam of the box. This was there to keep the two foams separated when the foam of the cooling unit was poured while the cooling unit was already in place. This plastic can be discarded. This is also why there can be a little difference between the foam heads of cooling units.

Installation: Inspect the new unit that you are going to install for freight damage. One common problem that is easier to fix before installation than after is a bent freezer coil. The freezer coil should be perpendicular to the back of the cooling unit, or level with the floor when installed. If the coil is bent and the cooling unit is still free from the refrigerator, you can stand on the coils to bend them back in position. If the cooling unit is installed, you can use a bar, as in the graphic below, to level the freezer coil.
