Advanced Learning Analytics Methods Mohammed Saqr, Sonsoles López-Pernas, 2025-10-25 This is an open access book. This comprehensive and timely methodological book introduces several novel topics under the overarching sections of advanced learning analytics, LA, artificial intelligence, AI, precision education, and complex systems. These topics are presented using accessible language, beginning with introductory chapters that cover the fundamentals of each section, followed by step-by-step tutorials featuring code and datasets for various methods within each area. Although the title refers to advanced LA, the book is written for the broader educational research community and is of interest to quantitative researchers from diverse backgrounds. The first section focuses on Explainable AI and machine learning ML, with an introduction to the methods, their applications, and tutorials. The second section outlines the foundational concepts of LLMs, their potential applications, and related methodologies, with a tutorial on using LLMs in various analytical tasks. The third section focuses on complex systems, which have become integral to many disciplines and have enabled breakthroughs in modeling intractable problems. Here, three chapters cover Transition Network Analysis (TNA), which fills a critical gap in modeling the temporal unfolding of learning processes over time from a complex systems perspective. The final section addresses precision education, with a particular emphasis on person-centered and person-specific idiographic methodologies.

A Practical Guide for Advanced Methods in Solar Photovoltaic Systems Adel Mellit, Mohamed Benghanem, 2020-05-27 The present book focuses on recent advances, methods, and applications in photovoltaic (PV) systems. The book is divided into two parts: the first part deals with some theoretical simulation and experiments on solar cells, including efficiency improvement, new materials, and behavior performances. While the second part of the book is devoted mainly to the application of advanced methods in PV systems, including advanced control, FPGA implementation, output power forecasting based on artificial intelligence techniques, AI, high PV penetration, reconfigurable PV architectures, and fault detection and diagnosis based on AI. The authors of the book try to show to readers more details about some theoretical methods and applications in solar cells and PV systems, e.g., advanced algorithms for control, optimization, power forecasting, monitoring, and fault diagnosis methods. The applications are mainly carried out in different laboratories and locations around the world as projects in Algeria, KSA, Turkey, Morocco, Italy, and France. The book will be addressed to scientists, academics, researchers, and PhD students working in this topic. The book will help readers to understand some applications, including control, forecasting, monitoring, fault diagnosis of photovoltaic plants, as well as in solar cells, such as behavior performances and efficiency improvement. It could be also used as a reference and help industry sectors interested by prototype development.
