front yard of her family s home After a week of searching Olivia s body was suddenly found in the closet even after the police had thoroughly investigated the home Ethan Franco is a troubled journalist working for the Washington Gazette His inability to move on from the past has deflated the passion he had for his career causing him to lose his edge Frustrated with Ethan Franco but not wanting to lose his once star journalist Editor in Chief Jameson Stone assigns him a story to cover as a last chance to prove he could be the reporter he once was Ethan Franco begins his investigation into the mysterious death of Olivia Baxter and other unexplained disappearances believing there may be a connection in the cases No sooner did Franco begin his investigation then he realizes he is being tailed by government agencies Large footprints in the woods strange sounds foul stench and a looming government presence become pieces of the puzzle in cases of the missing Inspired by real events the author of the Bohemian Grove trilogy and The Apocalypse brings forth a story that has been kept a secret for over a century a story that a large group of people are still trying to keep under wraps Bayesian Nonparametrics for

Causal Inference and Missing Data Michael J. Daniels, Antonio Linero, Jason Roy, 2023-08-23 Bayesian Nonparametrics for Causal Inference and Missing Data provides an overview of flexible Bayesian nonparametric BNP methods for modeling joint or conditional distributions and functional relationships and their interplay with causal inference and missing data This book emphasizes the importance of making untestable assumptions to identify estimands of interest such as missing at random assumption for missing data and unconfoundedness for causal inference in observational studies Unlike parametric methods the BNP approach can account for possible violations of assumptions and minimize concerns about model misspecification The overall strategy is to first specify BNP models for observed data and then to specify additional uncheckable assumptions

to identify estimands of interest The book is divided into three parts Part I develops the key concepts in causal inference and missing data and reviews relevant concepts in Bayesian inference Part II introduces the fundamental BNP tools required to address causal inference and missing data problems Part III shows how the BNP approach can be applied in a variety of case studies The datasets in the case studies come from electronic health records data survey data cohort studies and randomized clinical trials Features Thorough discussion of both BNP and its interplay with causal inference and missing data How to use BNP and g computation for causal inference and non ignorable missingness How to derive and calibrate sensitivity parameters to assess sensitivity to deviations from uncheckable causal and or missingness assumptions Detailed case studies illustrating the application of BNP methods to causal inference and missing data R code and or packages to implement BNP in causal inference and missing data problems The book is primarily aimed at researchers and graduate students from statistics and biostatistics It will also serve as a useful practical reference for mathematically sophisticated epidemiologists and medical researchers
