Smil, 2013-02-08 The story of how diesel engines and gas turbines used to power cargo ships and jet airplanes made today's  
globally integrated economy possible The many books on globalization published over the past few years range from claims  
that the world is flat to an unlikely rehabilitation of Genghis Khan as a pioneer of global commerce Missing from these  
accounts is a consideration of the technologies behind the creation of the globalized economy What makes it possible for us  
to move billions of tons of raw materials and manufactured goods from continent to continent Why are we able to fly almost  
anywhere on the planet within twenty four hours In *Prime Movers of Globalization* Vaclav Smil offers a history of two key  
technical developments that have driven globalization the high compression non sparking internal combustion engines  
invented by Rudolf Diesel in the 1890s and the gas turbines designed by Frank Whittle and Hans Joachim Pabst von Ohain in  
the 1930s The massive diesel engines that power cargo ships and the gas turbines that propel jet engines Smil argues are  
more important to the global economy than any corporate structure or international trade agreement Smil compares the  
efficiency and scale of these two technologies to prime movers of the past including the sail and the steam engine The  
lengthy processes of development commercialization and diffusion that the diesel engine and the gas turbine went through  
he argues provide perfect examples of gradual technical advances that receive little attention but have resulted in epochal  
shifts in global affairs and the global economy      Books in Print ,1979      **Subject Guide to Children's Books in Print
