Baird's Manual of American College Fraternities, 1929 **Inside Macintosh** Caroline Rose, 1985 Counting the Miracles: Jewish Thought, Mysticism, and the Arts from Late Antiquity to the Present Silvana Greco, Judith Olszowy-Schlanger, 2025-05-19 In honor of the writings of Giulio Busi, scholar of Jewish culture, the book investigates from a multidisciplinary perspective the extraordinary richness of Jewish culture in the Diaspora from antiquity to the latter part of the 20th century. A number of rabbinic writings, medieval manuscripts from the South of France, visual qabbalah, the Yiddish language, artistic expressions as well as the philosophical and social traditions of some prominent twentieth century figures will be explored. While the Jewish cultural tradition has always incorporated the cultural influences of the broader socio-historical context in which it was embedded, it has in turn been a source of inspiration for the intellectual life of the majority society. In this regard, the volume will examine the fruitful mutual exchange between Jewish scholars and Christian humanists during the Renaissance. However, the life of Jews in the Diaspora did not always take place in a context of peaceful integration. It was punctuated by harsh confrontations and persecution. Finally, the book will illustrate how, precisely during the darkest and most tragic period of the 20th century, Jewish culture was an important tool of resistance and struggle against Nazi Fascism.

Molecular Architecture and Dynamics of Meiotic Chromosomes Ricardo Benavente, Mónica Pradillo, Pedro A. San-Segundo, 2024-03-11 Meiosis is a special type of cell division that allows the generation of haploid gametes and is a key process for sexual reproduction of animals, plants, and fungi. Haploidization requires that meiotic cells undergo a series of unique processes, namely pairing, synapsis, recombination, and segregation of homologous chromosomes. This involves profound meiosis-specific changes in the protein composition and architecture of homologous chromosomes as well as of the condensation and folding of chromatin that require a critical timing and regulation. Despite this enormous complexity, different organisms may achieve haploidization through common molecular mechanisms. A major goal of this article collection is to provide an overview of how meiotic chromosomes and their components are critically involved in the mechanisms of haploidization and how dynamic

protein complexes yield important structural intermediates and temporal regulation to this process We welcome submissions of original articles mini reviews and review articles dealing with the composition architecture function and regulation of meiotic chromosomes of animals plants and fungi using microscopic biochemical molecular genetic and or omic techniques
