

## Oxygen Systems

Two independent oxygen systems are provided: one for the flight deck and one for the passengers and flight attendants.

The oxygen system consists of:

- A cockpit fixed oxygen system
- A cabin fixed oxygen system
- A portable oxygen system

### Emergency Oxygen – Passenger and Flight Attendant Passenger Cabin

The passenger oxygen system is supplied by chemical oxygen generators. Oxygen masks are contained in the oxygen stowage box located in lavatory ceilings, crew rest bunks, and in the passenger service unit (PSU) above the passenger seat. One mask is supplied for each passenger seat and two for each lavatory. Pulling on the mask turns on the flow of oxygen to all masks contained in the PSU.

Oxygen is available for approximately 22 minutes.

Masks automatically drop from stowage and a continuous flow of oxygen is initiated when a mask is pulled. Pulling on the mask causes oxygen flow.

The system activates automatically if cabin altitude exceeds approximately 13,500 feet. If a group of masks fails to drop, the oxygen mask compartment may be opened manually.

**Note:** If the masks fail to drop from a PSU, the cover of the oxygen compartment can be opened manually by releasing the door latch. The latch can be opened by inserting a hair pin or a thin rod into the hole of the compartment cover.

The system may be manually activated by the flight crew at any altitude by pushing the passenger oxygen switch on the flight deck.

**WARNING:** the oxygen generator surface temperature may reach 260°C when generating oxygen. Don't touch or attempt to remove generator. Burn injury can result. If an active generator is inadvertently removed from compartment, it must be placed in a metal container such as lavator or galley sink. Heat will scorch other materials or fabrics.
