

Instructions: Use this guide to help you read the chapter of our textbook. Bring your completed guide with you to class on the day that we are scheduled to discuss the chapter!

29.1 Origin of Land Plants

Green algae and land plants have a common ancestor approximately how long ago? 0.5 BYA

Circle the groups included by our text in the term "green plants"

red algae / brown algae / green algae / archaea / land plants / bacteria / fungi / animals

Note: The term Viridiplantae may be used as the kingdom name to indicate the "green plants" (= land plants, plus nearest kin in the green algae).

Fig. 29.1 Green plant phylogeny

Define the function of each structure.

- **cuticle** – Most plants have a waxy surface layer that keeps them from drying out.
- **stomata** – tiny mouth-shaped openings
- **tracheids** – classified as the closest descendants of the first land plants that lack transport cells

Why is a diploid genome advantageous for a terrestrial plant?

Provides a greater genetic potential to carry out multiple functions

Sketch and label a diagram of the **haplodiplontic life cycle** in the space below (see fig. 29.2)!

*Note: Do this by hand; do not copy and paste the diagram from our text or another source!

The sporophyte / gametophyte is the multicellular stage that is haploid.

The sporophyte / gametophyte is the multicellular stage that is diploid.

Meiosis / Mitosis is the cell division process that produces spores in the haplodiplontic life cycle.

Meiosis / Mitosis is the cell division process that produces gametes in the haplodiplontic life cycle.

In mosses and ferns, the gametophyte / sporophyte stage is photosynthetic and free-living.

In gymnosperms and angiosperms, the gametophyte / sporophyte stage is reduced to a few cells.

Check yourself against the textbook's learning outcomes:

- Explain the relationship between the different algae clades and plants.
- Describe the haplodiplontic life cycle.
- Distinguish between a sporophyte and a gametophyte.
- Identify two major environmental challenges for land plants and associated adaptations.

29.2 Bryophytes Have a Dominant Gametophyte Generation

*The term bryophyte as used in your text refers to three groups of **nontracheophyte** plants: liverworts (phylum Hepaticophyta), mosses (phylum Bryophyta), and hornworts (phylum Acanthoceratophyta).*

True or false? - Bryophytes are haplodiplontic organisms.
