In Africa both fields have increasingly become subject to monetization and commodification in short the market. Based on extensive fieldwork in nine African countries by scholars with diverse academic backgrounds, this volume offers different perspectives on the emerging markets and the way medical staff, patients, households and institutions navigate them in their quest for well-being. Recent advances in biotechnology at the microscopic level involve manipulating cells, editing DNA and synthesizing genomes. Our book covers plant biology basics, new biotechnology tools and advances, plant cell structure and function, system biology, genomes, plant disease resistance, plant tissue culture and chloroplast biology. Each chapter includes summaries and discussion questions to reinforce learning. This book is an invaluable resource for students and individuals seeking a deeper understanding of plant biotechnology and genetics.
